REFERENCE   3  (bases 1 to 28199)
  AUTHORS   Washington University Genome Sequencing Center.
  TITLE     A Fugu rubripes Genome Sequencing Project
  JOURNAL   Unpublished (1997)
REFERENCE   4  (bases 1 to 28199)
  AUTHORS   Waterston,R.
  TITLE     Direct Submission
  JOURNAL   Submitted (11-JUL-1997) Department of Genetics, Washington
            University, 4444 Forest Park Avenue, St. Louis, Missouri 63108, USA
COMMENT     On Nov 21, 1997 this sequence version replaced gi:2623547.
            Submitted by:
                    Genome Sequencing Center
                    Department of Genetics, Washington University,
                    St. Louis, MO 63108, USA
                    e-mail: rw@nematode.wustl.edu

            NOTICE:  This sequence may not be the entire insert of this clone.
            It may be shorter because we only sequence overlapping sections
            once, or longer because we provide a small overlap between
            neighboring submissions.

            This sequence was finished as follows unless otherwise noted:
            all regions were double stranded or sequenced with an alternate
            chemistry; an attempt was made to resolve all sequencing problems,
            such as compressions and repeats; all regions were covered by
            sequence from more than one subclone

            Library information:
            Gridded Fugu library from the UK HGMP Resource Centre at Hinxton.

                    NEIGHBORING COSMID INFORMATION:

            The left neighbor is 259C6, 19100 base overlap. The actual start of
            this clone is at base position 22192 of 259C6; the actual end is at
            base position 28199 of 48D10.

            This cosmid contains a tandem repeat from 23145 to 25326. The
            tandem is deleted, and has regions which are single stranded.
            Attempts to size the deletion with digest data were inconclusive.
            The size was estimated to be
            1.7 kb from a PCR product obtained by Dr. Dick Sandford.

            NOTES:

            Coding sequences below are predicted from computer analysis, using
            the program Genefinder(P. Green and L. Hillier, ms in preparation).

  JOURNAL   Submitted (11-OCT-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Oct 9, 2002 this sequence version replaced gi:22795167.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

            ----------
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 9 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     1386: contig of 1386 bp in length
            *     1387     1486: gap of unknown length
            *     1487     3048: contig of 1562 bp in length
            *     3049     3148: gap of unknown length
            *     3149     6869: contig of 3721 bp in length
            *     6870     6969: gap of unknown length
            *     6970    26526: contig of 19557 bp in length
            *    26527    26626: gap of unknown length

  TITLE     Direct Submission
  JOURNAL   Submitted (09-OCT-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Sep 14, 2002 this sequence version replaced gi:22094155.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequening reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/).  As a result, the
            sequence may extend beyond the ends of the clone and there may be
            contigs that consist entirely of whole genome shotgun sequence
            reads.  Both end sequences and whole genome shotgun sequence only
```

```
          contigs will be indicated in the feature table.

  TITLE     Direct Submission
  JOURNAL   Submitted (13-MAY-2003) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On May 13, 2003 this sequence version replaced gi:25188618.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

  TITLE     Direct Submission
  JOURNAL   Submitted (13-NOV-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Nov 13, 2002 this sequence version replaced gi:22772261.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.
            ---------- Genome Center

          ---------- Project Information
            Center project name: GEHU
            Center clone name: CH230-21E2
          ---------- Summary Statistics
            Assembly program: Phrap; version 0.990329
            Consensus quality: 219869 bases at least Q40
            Consensus quality: 225773 bases at least Q30
            Consensus quality: 229378 bases at least Q20
            Estimated insert size: 221309; sum-of-contigs estimation
            Quality coverage: 5x in Q20 bases; sum-of-contigs estimation
          ----------
          * NOTE: Estimated insert size may differ from sequence length
          *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
          * NOTE: This is a 'working draft' sequence. It currently
          * consists of 5 contigs. The true order of the pieces
          *.is not known and their order in this sequence record is
          * arbitrary. Gaps between the contigs are represented as
          * runs of N, but the exact sizes of the gaps are unknown.
          * This record will be updated with the finished sequence
          * as soon as it is available and the accession number will
          * be preserved.
          *        1    10670: contig of 10670 bp in length
          *    10671    10770: gap of unknown length
          *    10771   266157: contig of 255387 bp in length
          *   266158   266257: gap of unknown length
          *   266258   267281: contig of 1024 bp in length
          *   267282   267381: gap of unknown length
          *   267382   268591: contig of 1210 bp in length
          *   268592   268691: gap of unknown length
          *   268692   271233: contig of 2542 bp in length.

            Grovemont Circle, Gaithersburg, MD 20877, USA
COMMENT     On Aug 30, 2002 this sequence version replaced gi:17155042.
            -------------- Genome Center
                 Center: NIH Intramural Sequencing Center
                 Center code: NISC
                 Web site: http://www.nisc.nih.gov
                 Contact: nisc_zoo@nhgri.nih.gov
            -------------- Project Information
                 Center project name: arp
                 Center clone name: 205P11

            The sequence data in this record represents an 'enhanced'
            version of a Phase 2 submission. Specifically, the indicated
            order and orientation of each sequence contig has been
            established using one or more of the following: read-pair
            data from individual subclones, overlaps with neighboring
            clones, alignment with available reference sequence (e.g.,
            human), and/or confirmation by PCR testing. In addition,
            the sequence assembly is based on at least 8X average
            coverage in Q20 bases and has been reviewed to rule out
            gross misassemblies, the low-quality ends of sequence
            contigs have been trimmed away, and each base is associated
            with a Phrap-derived quality score.
            -------------- Summary Statistics
                 Sequencing vector: plasmid; n/a; 100% of reads
                 Chemistry: Dye-terminator Big Dye; 100% of reads
                 Assembly program: Phrap; version 0.990319
                 Consensus quality: 87141 bases at least Q40
                 Consensus quality: 87741 bases at least Q30
                 Consensus quality: 87993 bases at least Q20
                 Insert size: 89000; agarose-fp
                 Insert size: 88116; sum-of-contigs
                 Quality coverage: 10.68x in Q20 bases; agarose-fp
                 Quality coverage: 10.79x in Q20 bases; sum-of-contigs
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 7 contigs. Gaps between the contigs
            * are represented as runs of N. The order of the pieces
            * is believed to be correct as given, however the sizes
            * of the gaps between them are based on estimates that have
            * provided by the submittor.
            * This sequence will be replaced
            * by the finished sequence as soon as it is available and
            * the accession number will be preserved.
            *        1    31156: contig of 31156 bp in length
            *    31157    31256: gap of unknown length
            *    31257    36515: contig of 5259 bp in length
            *    36516    36615: gap of unknown length
            *    36616    38675: contig of 2060 bp in length
            *    38676    38775: gap of unknown length
            *    38776    41147: contig of 2372 bp in length
            *    41148    41247: gap of unknown length
            *    41248    48183: contig of 6936 bp in length
            *    48184    48283: gap of unknown length
            *    48284    50318: contig of 2035 bp in length
            *    50319    50418: gap of unknown length
            *    50419    88716: contig of 38298 bp in length.

  TITLE     Direct Submission
  JOURNAL   Submitted (10-MAY-2003) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On May 10, 2003 this sequence version replaced gi:24819680.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.
            -------------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM
                Web site: http://www.hgsc.bcm.tmc.edu/
                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: GFHU
                Center clone name: CH230-59F13
            -------------- Summary Statistics
               Assembly program: Atlas 3.0;
                Consensus quality: 261063 bases at least Q40
                Consensus quality: 264086 bases at least Q30
                Consensus quality: 266112 bases at least Q20
                Estimated insert size: 272725; sum-of-contigs estimation
                Quality coverage: 6x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)
            * NOTE: This sequence may represent more than one clone.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 1 contigs. Gaps between the contigs
            * are represented as runs of N. The order of the pieces
            * is believed to be correct as given, however the sizes
            * of the gaps between them are based on estimates that have
            * provided by the submittor.
            * This sequence will be replaced
            * by the finished sequence as soon as it is available and
            * the accession number will be preserved.
            *         1   275443: contig of 275443 bp in length.

                Quality coverage: 11.2 in Q20 bases; agarose-fp
                Quality coverage: 11.0 in Q20 bases; sum-of-contigs
            --------------
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 3 contigs. Gaps between the contigs
            * are represented as runs of N. The order of the pieces
            * is believed to be correct as given, however the sizes
            * of the gaps between them are based on estimates that have
            * provided by the submittor.
            * This sequence will be replaced
            * by the finished sequence as soon as it is available and
            * the accession number will be preserved.
            *       1    31803: contig of 31803 bp in length
            *   31804    31903: gap of 100 bp
            *   31904    80596: contig of 48693 bp in length
            *   80597    80696: gap of 100 bp
            *   80697   246968: contig of 166272 bp in length.

TITLE Direct Submission
JOURNAL Submitted (13-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
COMMENT On Nov 13, 2002 this sequence version replaced gi:23665230.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

---------- Project Information
Center project name: GOPR
Center clone name: CH230-95C4
---------- Summary Statistics
Assembly program: Phrap; version 0.990329
Consensus quality: 222780 bases at least Q40
Consensus quality: 224645 bases at least Q30
Consensus quality: 225630 bases at least Q20
Estimated insert size: 230869; sum-of-contigs estimation
Quality coverage: 7x in Q20 bases; sum-of-contigs estimation
----
* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 1 contigs. Gaps between the contigs
* are represented as runs of N. The order of the pieces
* is believed to be correct as given, however the sizes
* of the gaps between them are based on estimates that have
* provided by the submittor.
* This sequence will be replaced
* by the finished sequence as soon as it is available and

```
          * the accession number will be preserved.
          *        1   242482: contig of 242482 bp in length.

                Consensus quality: 231441 bases at least Q30
                Consensus quality: 233224 bases at least Q20
                Estimated insert size: 235507; sum-of-contigs estimation
                Quality coverage: 7x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 3 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1    78039: contig of 78039 bp in length
            *    78040    78139: gap of unknown length
            *    78140   241585: contig of 163446 bp in length
            *   241586   241685: gap of unknown length
            *   241686   245258: contig of 3573 bp in length.

COMMENT     On Dec 6, 2002 this sequence version replaced gi:23573260.
            Sequence from the Mouse Genome Sequencing Consortium whole genome
            shotgun may have been used to confirm this sequence.  Sequence data
```

from the whole genome shotgun alone has only been used where it has a phred quality of at least 30.
---------- Genome Center
Center: Wellcome Trust Sanger Institute
Center code: SC
Web site: http://www.sanger.ac.uk
Contact: humquery@sanger.ac.uk

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.
This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.
The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep RP23-202K13 is from the RPCI-23 Mouse PAC Library
constructed by the group of Pieter de Jong.

  TITLE     Direct Submission
  JOURNAL   Submitted (19-NOV-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Nov 19, 2002 this sequence version replaced gi:23908265.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

  TITLE     Direct Submission
  JOURNAL   Submitted (12-OCT-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Oct 12, 2002 this sequence version replaced gi:21747233.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.
            -------------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM
                Web site: http://www.hgsc.bcm.tmc.edu/
                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: GVTN
                Center clone name: CH230-379J13
            -------------- Summary Statistics
                Assembly program: Phrap; version 0.990329
                Consensus quality: 186506 bases at least Q40
                Consensus quality: 187889 bases at least Q30
                Consensus quality: 188707 bases at least Q20
                Estimated insert size: 191116; sum-of-contigs estimation
                Quality coverage: 7x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 1 contigs. Gaps between the contigs
            * are represented as runs of N. The order of the pieces
            * is believed to be correct as given, however the sizes
            * of the gaps between them are based on estimates that have
            * provided by the submittor.
            * This sequence will be replaced
            * by the finished sequence as soon as it is available and
            * the accession number will be preserved.
            *         1   201016: contig of 201016 bp in length.

              Quality coverage: 2x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 73 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     1049: contig of 1049 bp in length

  TITLE   Direct Submission
  JOURNAL Submitted (09-MAY-2003) Human Genome Sequencing Center, Department
          of Molecular and Human Genetics, Baylor College of Medicine, One
          Baylor Plaza, Houston, TX 77030, USA
COMMENT   On May 9, 2003 this sequence version replaced gi:24955409.
          The sequence in this assembly is a combination of BAC based reads
          and whole genome shotgun sequencing reads assembled using Atlas
          (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
          in the feature table below represents a scaffold in the Atlas
          assembly (a 'contig-scaffold'). Within each contig-scaffold,
          individual sequence contigs are ordered and oriented, and separated
          by sized gaps filled with Ns to the estimated size. The sequence
          may extend beyond the ends of the clone and there may be sequence
          contigs within a contig-scaffold that consist entirely of whole
          genome shotgun sequence reads. Both end sequences and whole genome
          shotgun sequence only contigs will be indicated in the feature
          table.

  TITLE     Direct Submission
  JOURNAL   Submitted (09-MAY-2003) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On May 9, 2003 this sequence version replaced gi:24819678.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.
            -------------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM
                Web site: http://www.hgsc.bcm.tmc.edu/
                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: GABE
                Center clone name: CH230-3D20
            -------------- Summary Statistics
                Assembly program: Atlas;
                Consensus quality: 233178 bases at least Q40
                Consensus quality: 236706 bases at least Q30
                Consensus quality: 239237 bases at least Q20
                Estimated insert size: 245474; sum-of-contigs estimation
                Quality coverage: 6x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 3 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *       1   254381: contig of 254381 bp in length
            *  254382   254481: gap of unknown length
            *  254482   255929: contig of 1448 bp in length
            *  255930   256029: gap of unknown length
            *  256030   257675: contig of 1646 bp in length.

  TITLE     Direct Submission
  JOURNAL   Submitted (09-NOV-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Nov 9, 2002 this sequence version replaced gi:23101414.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

  TITLE     Direct Submission
  JOURNAL   Submitted (09-OCT-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Sep 19, 2002 this sequence version replaced gi:21738042.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.
            -------------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM

            -------------- Project Information
                Center project name: GQEA
                Center clone name: CH230-228K2
            -------------- Summary Statistics
                Assembly program: Phrap; version 0.990329
                Consensus quality: 233404 bases at least Q40
                Consensus quality: 236957 bases at least Q30
                Consensus quality: 239428 bases at least Q20
                Estimated insert size: 252351; sum-of-contigs estimation
                Quality coverage: 4x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)
            * NOTE: This sequence may represent more than one clone.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 3 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1   170363: contig of 170363 bp in length
            *   170364   170463: gap of unknown length
            *   170464   271425: contig of 100962 bp in length
            *   271426   271525: gap of unknown length
            *   271526   272652: contig of 1127 bp in length.

  TITLE     Direct Submission
  JOURNAL   Submitted (10-MAY-2003) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On May 10, 2003 this sequence version replaced gi:25092334.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.
            -------------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM
                Web site: http://www.hgsc.bcm.tmc.edu/

            -------------- Project Information
                Center project name: GHRX
                Center clone name: CH230-208G21
            -------------- Summary Statistics
                Assembly program: Atlas 3.0;
                Consensus quality: 223543 bases at least Q40
                Consensus quality: 225303 bases at least Q30
                Consensus quality: 226470 bases at least Q20
                Estimated insert size: 235136; sum-of-contigs estimation
                Quality coverage: 8x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 2 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *         1   233348: contig of 233348 bp in length
            *   233349   233448: gap of unknown length
            *   233449   234474: contig of 1026 bp in length.

TITLE Direct Submission
JOURNAL Submitted (13-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
COMMENT On May 13, 2003 this sequence version replaced gi:23268877.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

            -------------- Summary Statistics
                Sequencing vector: Plasmid; n/a; 100% of reads
                Chemistry: Dye-terminator Big Dye; 100% of reads
                Assembly program: Phrap; version 0.960731
                Consensus quality: 206691 bases at least Q40
                Consensus quality: 208198 bases at least Q30
                Consensus quality: 208925 bases at least Q20
                Insert size: 220000; agarose-fp
                Insert size: 209464; sum-of-contigs
                Quality coverage: 8.3 in Q20 bases; agarose-fp
                Quality coverage: 8.7 in Q20 bases; sum-of-contigs
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 16 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1      622: contig of 622 bp in length
            *      623      722: gap of 100 bp

  TITLE     Direct Submission
  JOURNAL   Submitted (19-NOV-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Nov 19, 2002 this sequence version replaced gi:22855982.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.
            -------------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM
                Web site: http://www.hgsc.bcm.tmc.edu/
                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: GZNP
                Center clone name: CH230-381B8
            -------------- Summary Statistics
                Assembly program: Phrap; version 0.990329
                Consensus quality: 150327 bases at least Q40
                Consensus quality: 152783 bases at least Q30
                Consensus quality: 154221 bases at least Q20
                Estimated insert size: 156901; sum-of-contigs estimation
                Quality coverage: 6x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 2 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *       1   192049: contig of 192049 bp in length
            *  192050   192149: gap of unknown length
            *  192150   196519: contig of 4370 bp in length.

  JOURNAL   Submitted (03-OCT-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Sep 10, 2002 this sequence version replaced gi:21722802.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequening reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/).  As a result, the
            sequence may extend beyond the ends of the clone and there may be
            contigs that consist entirely of whole genome shotgun sequence
            reads.  Both end sequences and whole genome shotgun sequence only
            contigs will be indicated in the feature table.

COMMENT     On May 14, 2003 this sequence version replaced gi:29561863.
            Sequence from the Mouse Genome Sequencing Consortium whole genome
            shotgun may have been used to confirm this sequence.  Sequence data
            from the whole genome shotgun alone has only been used where it has
            a phred quality of at least 30.

  JOURNAL   Submitted (10-MAY-2003) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On May 10, 2003 this sequence version replaced gi:24957732.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

  TITLE     Direct Submission
  JOURNAL   Submitted (13-MAY-2003) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On May 13, 2003 this sequence version replaced gi:23606102.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.
            -------------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM
                Web site: http://www.hgsc.bcm.tmc.edu/
                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: GLLO
                Center clone name: CH230-227L10
            -------------- Summary Statistics
                Assembly program: Atlas 3.0;
                Consensus quality: 225209 bases at least Q40
                Consensus quality: 228391 bases at least Q30
                Consensus quality: 230534 bases at least Q20
                Estimated insert size: 239097; sum-of-contigs estimation
                Quality coverage: 6x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 3 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *       1   233995: contig of 233995 bp in length
            *  233996   234095: gap of unknown length
            *  234096   235636: contig of 1541 bp in length
            *  235637   235736: gap of unknown length
            *  235737   238112: contig of 2376 bp in length.

  TITLE     Direct Submission
  JOURNAL   Submitted (31-MAY-2002) Celera Genomics, 45 West Gude Drive,
            Rockville, MD 20850, USA
COMMENT     The strings of n's in this record represent gaps between contigs,
            and the length of each string corresponds to the length of the gap
            except where there are 20 n's.  A string of 20 n's represents a gap
            of unknown length.

---------- Summary Statistics
Sequencing vector: Plasmid; n/a; 100% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 0.960731
Consensus quality: 186712 bases at least Q40
Consensus quality: 187848 bases at least Q30
Consensus quality: 188381 bases at least Q20
Insert size: 194000; agarose-fp
Insert size: 188676; sum-of-contigs
Quality coverage: 8.0 in Q20 bases; agarose-fp
Quality coverage: 8.2 in Q20 bases; sum-of-contigs
----
* NOTE: This is a 'working draft' sequence. It currently
* consists of 10 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
* 1 47737: contig of 47737 bp in length
* 47738 47837: gap of 100 bp
* 47838 48894: contig of 1057 bp in length
* 48895 48994: gap of 100 bp
* 48995 49945: contig of 951 bp in length
* 49946 50045: gap of 100 bp
* 50046 51530: contig of 1485 bp in length

  TITLE     Direct Submission
  JOURNAL   Submitted (19-NOV-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Nov 19, 2002 this sequence version replaced gi:23195993.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.
            -------------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM
                Web site: http://www.hgsc.bcm.tmc.edu/
                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: KBYE
                Center clone name: CH230-101A12
            -------------- Summary Statistics
                Assembly program: Phrap; version 0.990329
                Consensus quality: 225270 bases at least Q40
                Consensus quality: 227698 bases at least Q30
                Consensus quality: 229450 bases at least Q20
                Estimated insert size: 226046; sum-of-contigs estimation
                Quality coverage: 6x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 4 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1    15508: contig of 15508 bp in length
            *    15509    15608: gap of unknown length
            *    15609   224342: contig of 208734 bp in length
            *   224343   224442: gap of unknown length
            *   224443   225652: contig of 1210 bp in length
            *   225653   225752: gap of unknown length
            *   225753   238255: contig of 12503 bp in length.

JOURNAL Submitted (09-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
COMMENT On Nov 9, 2002 this sequence version replaced gi:23101726.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

---------- Project Information
Center project name: GMPU
Center clone name: CH230-10104
---------- Summary Statistics
Assembly program: Phrap; version 0.990329
Consensus quality: 227436 bases at least Q40
Consensus quality: 229834 bases at least Q30
Consensus quality: 231317 bases at least Q20
Estimated insert size: 232522; sum-of-contigs estimation
Quality coverage: 8x in Q20 bases; sum-of-contigs estimation
----
* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 5 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
* 1 62473: contig of 62473 bp in length
* 62474 62573: gap of unknown length
* 62574 236709: contig of 174136 bp in length
* 236710 236809: gap of unknown length
* 236810 237884: contig of 1075 bp in length
* 237885 237984: gap of unknown length
* 237985 239022: contig of 1038 bp in length
* 239023 239122: gap of unknown length
* 239123 240200: contig of 1078 bp in length.

COMMENT     On Nov 9, 2002 this sequence version replaced gi:22772757.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Nov 19, 2002 this sequence version replaced gi:22857224.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

                Contact: sequence_submissions@genome.wi.mit.edu
            -------------- Project Information
                Center project name: L26523
                Center clone name: 97_G_2
            -------------- Summary Statistics
                Sequencing vector: Plasmid; n/a; 100% of reads
                Chemistry: Dye-terminator Big Dye; 100% of reads
                Assembly program: Phrap; version 0.960731
                Consensus quality: 205816 bases at least Q40
                Consensus quality: 206724 bases at least Q30
                Consensus quality: 207402 bases at least Q20
                Insert size: 183000; agarose-fp
                Insert size: 208094; sum-of-contigs
                Quality coverage: 9.8 in Q20 bases; agarose-fp
                Quality coverage: 8.7 in Q20 bases; sum-of-contigs
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 10 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     2678: contig of 2678 bp in length
            *     2679     2778: gap of 100 bp
            *     2779     7560: contig of 4782 bp in length
            *     7561     7660: gap of 100 bp

  TITLE     Direct Submission
  JOURNAL   Submitted (08-OCT-2002) Wellcome Trust Sanger Institute, Hinxton,
            Cambridgeshire, CB10 1SA, UK. E-mail enquiries:
            humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
COMMENT     On Oct 12, 2002 this sequence version replaced gi:23395436.
            -------------- Genome Center
            Center: Wellcome Trust Sanger Institute
            Center code: SC
            Web site: http://www.sanger.ac.uk
            Contact: humquery@sanger.ac.uk
            --------------
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest. The following
            abbreviations are used to associate primary accession numbers given
            in the feature table with their source databases: Em:, EMBL; Sw:,
            SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP
            database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep RP23-141B15 is
            from the RPCI-23 Mouse PAC Library
            constructed by the group of Pieter de Jong.

                Center project name: L9178
                Center clone name: 129_L_22
            -------------- Summary Statistics
                Sequencing vector: M13; M77815; 7% of reads
                Sequencing vector: Plasmid; n/a; 93% of reads
                Chemistry: Dye-terminator Big Dye; 100% of reads
                Assembly program: Phrap; version 0.960731
                Consensus quality: 151306 bases at least Q40
                Consensus quality: 164443 bases at least Q30
                Consensus quality: 169708 bases at least Q20
                Insert size: 230000; agarose-fp
                Insert size: 172292; sum-of-contigs
                Quality coverage: 2.4 in Q20 bases; agarose-fp
                Quality coverage: 3.2 in Q20 ba.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 70 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1      399: contig of 399 bp in length
            *      400      499: gap of 100 bp

            Mammalia; Eutheria; Rodentia; Sciurognathi; Muridae; Murinae; Mus.
REFERENCE   1  (bases 1 to 220050)
  AUTHORS   Phillimore,B.
  TITLE     Direct Submission
  JOURNAL   Submitted (09-OCT-2001) Sanger Centre, Hinxton, Cambridgeshire,
            CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone
            requests: clonerequest@sanger.ac.uk
COMMENT     On Oct 10, 2001 this sequence version replaced gi:14269983.
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest. The following
            abbreviations are used to associate primary accession numbers given
            in the feature table with their source databases: Em:, EMBL; Sw:,
            SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP
            database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep RP23-121M7 is
            from the RPCI-23 Mouse PAC Library
            constructed by the group of Pieter de Jong.
            For further details see http://www.chori.org/bacpac/home.htm
            VECTOR: pBACe3.6
            This sequence is the entire insert of clone RP23-121M7 The true
            left end of clone RP23-85M21 is at 142216 in this sequence. The
            true right end of clone RP23-10K12 is at 78004 in this sequence.

            humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
COMMENT     On Nov 15, 2001 this sequence version replaced gi:16596742.
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest. The following
            abbreviations are used to associate primary accession numbers given
            in the feature table with their source databases: Em:, EMBL; Sw:,
            SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP
            database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep RP23-10K12 is

  TITLE     Direct Submission
  JOURNAL   Submitted (20-NOV-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Nov 20, 2002 this sequence version replaced gi:23908319.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.
            -------------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM
                Web site: http://www.hgsc.bcm.tmc.edu/
                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: GVMT
                Center clone name: CH230-448L22
            -------------- Summary Statistics
                Assembly program: Phrap; version 0.990329
                Consensus quality: 170842 bases at least Q40
                Consensus quality: 172543 bases at least Q30
                Consensus quality: 173598 bases at least Q20
                Estimated insert size: 173300; sum-of-contigs estimation
                Quality coverage: 10x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 3 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1    78593: contig of 78593 bp in length
            *    78594    78693: gap of unknown length
            *    78694   216223: contig of 137530 bp in length
            *   216224   216323: gap of unknown length
            *   216324   217604: contig of 1281 bp in length.

TITLE Direct Submission
JOURNAL Submitted (18-SEP-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
COMMENT On Sep 18, 2002 this sequence version replaced gi:21738195.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequening reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). As a result, the sequence may extend beyond the ends of the clone and there may be contigs that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

Assembly program: Phrap; version 0.990329
Consensus quality: 162421 bases at least Q40
Consensus quality: 167280 bases at least Q30
Consensus quality: 170311 bases at least Q20
Estimated insert size: 191280; sum-of-contigs estimation
Quality coverage: 4x in Q20 bases; sum-of-contigs estimation

```
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 4 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     3627: contig of 3627 bp in length
            *     3628     3727: gap of unknown length
            *     3728   220749: contig of 217022 bp in length
            *   220750   220849: gap of unknown length
            *   220850   222487: contig of 1638 bp in length
            *   222488   222587: gap of unknown length
            *   222588   223892: contig of 1305 bp in length.

            Contact: zfish-help@sanger.ac.uk
            --------------
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest, except on the rare
            occasion of the clone being a YAC.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep Repeat names
            beginning 'Dr' were identified by the Recon repeat discovery system
            (Zhirong Bao and Sean Eddy, submitted), and those beginning 'drr'
            were identified by Rick Waterman (Stephen Johnson lab, WashU).  For
            further information see http://www/Projects/D_rerio/fishmask.shtml
            CH211-103D12 is from a CHORI-211 BAC library
            VECTOR: pTARBAC2.1.

                Consensus quality: 126303 bases at least Q40
                Consensus quality: 130569 bases at least Q30
                Consensus quality: 134257 bases at least Q20
                Estimated insert size: 128743; sum-of-contigs estimation
                Quality coverage: 3x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 39 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     1198: contig of 1198 bp in length
            *     1199     1298: gap of unknown length
            *     1299     2537: contig of 1239 bp in length

COMMENT     On Nov 20, 2002 this sequence version replaced gi:23803773.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
```

  TITLE     Direct Submission
  JOURNAL   Submitted (10-MAY-2003) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On May 10, 2003 this sequence version replaced gi:24942388.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.
            -------------- Genome Center
               Center: Baylor College of Medicine
               Center code: BCM
               Web site: http://www.hgsc.bcm.tmc.edu/
               Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
               Center project name: GETX
               Center clone name: CH230-88E19
            -------------- Summary Statistics
               Assembly program: Atlas 3.0;
               Consensus quality: 233657 bases at least Q40
               Consensus quality: 237987 bases at least Q30
               Consensus quality: 241136 bases at least Q20
               Estimated insert size: 250075; sum-of-contigs estimation
               Quality coverage: 6x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)
            * NOTE: This sequence may represent more than one clone.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 7 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     3892: contig of 3892 bp in length
            *     3893     3992: gap of unknown length
            *     3993   273529: contig of 269537 bp in length
            *   273530   273629: gap of unknown length
            *   273630   274710: contig of 1081 bp in length
            *   274711   274810: gap of unknown length
            *   274811   276051: contig of 1241 bp in length
            *   276052   276151: gap of unknown length
            *   276152   277399: contig of 1248 bp in length
            *   277400   277499: gap of unknown length
            *   277500   278685: contig of 1186 bp in length
            *   278686   278785: gap of unknown length
            *   278786   283593: contig of 4808 bp in length.

  TITLE     Direct Submission
  JOURNAL   Submitted (08-OCT-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Sep 14, 2002 this sequence version replaced gi:21735213.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

  TITLE     Direct Submission
  JOURNAL   Submitted (13-MAY-2003) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On May 13, 2003 this sequence version replaced gi:24818905.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
```

```
          genome shotgun sequence reads. Both end sequences and whole genome
          shotgun sequence only contigs will be indicated in the feature
          table.

  TITLE     Direct Submission
  JOURNAL   Submitted (09-MAY-2003) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On May 9, 2003 this sequence version replaced gi:24818271.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.
            -------------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM
                Web site: http://www.hgsc.bcm.tmc.edu/
                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: GBYH
                Center clone name: CH230-6K12
            -------------- Summary Statistics
                Assembly program: Atlas;
                Consensus quality: 226044 bases at least Q40
                Consensus quality: 227924 bases at least Q30
                Consensus quality: 229373 bases at least Q20
                Estimated insert size: 234613; sum-of-contigs estimation
                Quality coverage: 9x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 2 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1   236832: contig of 236832 bp in length
            *   236833   236932: gap of unknown length
            *   236933   238046: contig of 1114 bp in length.

PT New rhesus rhadino virus for producing non-human primate model useful
PT for testing potential treatments and efficacy of the candidate vaccine
PT for conditions associated with RRV infection -
XX
PS Claim 2; Page 83-122; 141pp; English.
XX
CC The present invention describes a novel rhesus macaque rhadinovirus
CC called macaca mulatta rhadinovirus 17577 (RRV). AAC64754 represents the
CC RRV genome sequence, and AAB53123 to AAB53204 represent the proteins
CC encoded by the genome sequence. The present invention also specifically
CC claims the individual open reading frame (ORF) nucleotide sequences from
CC the genome which encode the individual proteins, but these sequences are
CC not given. A non-human animal infected with RRV can be used for testing
CC the efficacy of drug in the treatment of condition associated with
CC infection with RRV such as Kaposi's sarcoma, lymphoproliferative
CC disorders, B-cell hyperplasia, lymphadenopathy, splenomegaly,
CC hypergammaglobinulinaemia or autoimmune haemolytic anaemia, by
CC administering the drug to a immuno-compromised non-human primate
CC preferably Rhesus macaque monkey obtained by as a result of infection
CC by Simian Immunodeficiency Virus (SIV). RRV is useful for producing
CC non-human primate model for testing potential treatments for conditions
CC associated with RRV infection. It is also useful for testing the
CC efficacy of the candidate vaccine against RRV infection or conditions
CC associated with its infection by administering the vaccine to the
CC subject capable of infection with RRV, inoculating the subject with RRV
CC and observing the effect of vaccine. AAC64755 to AAC64765 and AAB53205
CC to AAB53213 represent sequence used in the exemplification of the
CC present invention.

PT   Single exon nucleic acid probes for analyzing gene expression in human
PT   hearts -
XX
PS   Claim 4; SEQ ID No 19728; 530pp; English.
XX
CC   The present invention relates to single exon nucleic acid probes for
CC   measuring human gene expression in a sample derived from human heart. The
CC   present sequence is one such probe. The probes may be used for
CC   predicting, measuring and displaying gene expression in samples derived
CC   from the human heart via microarrays. By measuring gene expression, the
CC   probes are useful for predicting, diagnosing, grading, staging,
CC   monitoring and prognosing diseases of the human heart and vascular system
CC   e.g. cardiovascular disease, hypertension, cardiac arrhythmias and
CC   congenital heart disease.
CC   Note: The sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences.

PT   Single exon nucleic acid probes for analyzing gene expression in human
PT   hearts -
XX
PS   Claim 1; SEQ ID No 9605; 530pp; English.
XX
CC   The present invention relates to single exon nucleic acid probes for
CC   measuring human gene expression in a sample derived from human heart. The
CC   present sequence is one such probe. The probes may be used for
CC   predicting, measuring and displaying gene expression in samples derived
CC   from the human heart via microarrays. By measuring gene expression, the
CC   probes are useful for predicting, diagnosing, grading, staging,
CC   monitoring and prognosing diseases of the human heart and vascular system
CC   e.g. cardiovascular disease, hypertension, cardiac arrhythmias and
CC   congenital heart disease.
CC   Note: The sequence data for this patent did not form part of the printed
```

```
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences.

PT   New rhesus rhadino virus for producing non-human primate model useful
PT   for testing potential treatments and efficacy of the candidate vaccine
PT   for conditions associated with RRV infection  -
XX
PS   Claim 2; Page 83-122; 141pp; English.
XX
CC   The present invention describes a novel rhesus macaque rhadinovirus
CC   called macaca mulatta rhadinovirus 17577 (RRV). AAC64754 represents the
CC   RRV genome sequence, and AAB53123 to AAB53204 represent the proteins
CC   encoded by the genome sequence. The present invention also specifically
CC   claims the individual open reading frame (ORF) nucleotide sequences from
CC   the genome which encode the individual proteins, but these sequences are
CC   not given. A non-human animal infected with RRV can be used for testing
CC   the efficacy of drug in the treatment of condition associated with
CC   infection with RRV such as Kaposi's sarcoma, lymphoproliferative
CC   disorders, B-cell hyperplasia, lymphadenopathy, splenomegaly,
CC   hypergammaglobinulinaemia or autoimmune haemolytic anaemia, by
CC   administering the drug to a immuno-compromised non-human primate
CC   preferably Rhesus macaque monkey obtained by as a result of infection
CC   by Simian Immunodeficiency Virus (SIV). RRV is useful for producing
CC   non-human primate model for testing potential treatments for conditions
CC   associated with RRV infection. It is also useful for testing the
CC   efficacy of the candidate vaccine against RRV infection or conditions
CC   associated with its infection by administering the vaccine to the
CC   subject capable of infection with RRV, inoculating the subject with RRV
CC   and observing the effect of vaccine. AAC64755 to AAC64765 and AAB53205
CC   to AAB53213 represent sequence used in the exemplification of the
CC   present invention.

XX
PT   Kaposi's sarcoma-associated herpes virus nucleic acid - encodes
PT   di:hydro:folate reductase and is useful for treatment, prophylaxis
PT   or diagnosis of Kaposi's sarcoma
XX
PS   Disclosure; Column 67-96; 109pp; English.
XX
CC   This sequence is a fragment of the Kaposi's sarcoma-associated
CC   herpesvirus (KSHV) LUR (long unique region). This fragment contains
CC   coding regions for K1, ORF4 which encodes the complement binding protein
CC   v-CBP, ORF6 which encodes a ssDNA binding protein (SSBP), ORF7 which
CC   encodes a transport protein, ORF8 which encodes glycoprotein B, ORF9
CC   which encodes DNA polymerase (pol), ORF10, OFR11, K2 which encodes viral
CC   interleukin-6 (vIL-6), ORF02 which encodes dihydrofolate reductase
CC   (DHFR), K3 which encodes BHV4-IE1 I, ORF70 which encodes Thymidylate
CC   synthase, K4 which encodes vMIP-II, K5 which encodes BHV4-IE1 II, K6
CC   which encodes vMIP-I, K7, ORF16 which encodes Bcl-2, ORF17 which encodes
CC   capsid protein I, ORF18 and ORF19 which encodes Tegument protein I.
CC   KSHV is a new human Herpesvirus (HHV8) believed to cause Kaposi's sarcoma
CC   (KS) which is the most common form of neoplasm occurring in persons with
CC   acquired immune deficiency syndrome (AIDS). The DHFR protein is useful
CC   for vaccination, prophylaxis, diagnosis and treatment of a subject with
CC   Kaposi's sarcoma and for detecting expression of a DNA virus associated
CC   with Kaposi's sarcoma in a cell.

XX
CC   This sequence represents the long unique region and terminal repeat of
CC   the Kaposi's sarcoma-associated herpes virus (KSHV). KSHV is also known
CC   as human herpes virus 8 (HHV8). This sequence contains the DNAs of the
CC   invention which encode KSHV polypeptides selected from: (a) viral
CC   macrophage inflammatory protein (MIP) II; (b) viral interleukin-6 (IL-6);
CC   (c) viral IRF 1; (d) complement-binding protein; glycoproteins B, M or L;
CC   (d) capsid protein IV encoded by ORF65; and (e) immediate early protein
CC   encoded by ORF73. Labelled probes for the nucleic acid, proteins encoded
CC   by it, and antibodies (Ab) specific for the proteins are useful for
CC   detecting HHV8, specifically for diagnosis of Kaposi's sarcoma, in body
CC   fluids or tissue samples. HHV8 infections can be treated with antisense
CC   or triplex forming molecules or agents that bind specifically to the
CC   protein. Ab may be used for prophylaxis or treatment of HHV8 infection,
CC   while the protein can be used in protective vaccines. Ab may also be used
CC   to differentiate between lymphomas, and HHV8 may be implicated in many
CC   other lymphoproliferative diseases such as lymphomas, leukaemia,
CC   splenomegaly and mycosis fungoides. Cells and animals containing the
CC   nucleic acid are useful for drug screening. HHV8-derived peptides can be
CC   used as targets for antiviral drugs, e.g. dihydrofolate reductase gene
CC   can be inhibited with methotrexate. These can also be used to determine
CC   the immune status of a patient infected with HIV. HHV8 derived protein
CC   viral MIP III may be used as an anti-inflammatory agent for,
CC   e.g. treating rheumatoid arthritis. This sequence is stated as containing
CC   81 open reading frames.

XX
PT   Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
PT   useful for preventing, diagnosing and/or treating cancers and
PT   metastasis -
XX
PS   Disclosure; SEQ ID NO 34504; 3071pp + Sequence Listing; English.
XX
CC   AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC   amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC   activity, and can be used in gene therapy and vaccine production. (I)
CC   proteins and polynucleotides may be used in the prevention, diagnosis and
CC   treatment of diseases associated with inappropriate (I) expression. For
CC   example, they may be used to treat disorders associated with decreased
CC   expression by rectifying mutations or deletions in a patient's genome
CC   that affect the activity of (I) by expressing inactive proteins or to
CC   supplement the patients own production of (I). Additionally, (I)
CC   polynucleotides may be used to produce the secreted (I), by inserting
CC   the nucleic acids into a host cell and culturing the cell to express the
CC   protein. (I) proteins and polynucleotides may be used to prevent,
CC   diagnose and treat immune/haematopoietic-related diseases, especially
CC   cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC   to AAK87694 represent human immune/haematopoietic antigen genomic
CC   sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC   represent sequences used in the exemplification of the present invention.

PT Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
PT useful for preventing, diagnosing and/or treating cancers and
PT metastasis -
XX
PS Disclosure; SEQ ID NO 34836; 3071pp + Sequence Listing; English.
XX
CC AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC activity, and can be used in gene therapy and vaccine production. (I)
CC proteins and polynucleotides may be used in the prevention, diagnosis and
CC treatment of diseases associated with inappropriate (I) expression. For
CC example, they may be used to treat disorders associated with decreased
CC expression by rectifying mutations or deletions in a patient's genome
CC that affect the activity of (I) by expressing inactive proteins or to
CC supplement the patients own production of (I). Additionally, (I)
CC polynucleotides may be used to produce the secreted (I), by inserting
CC the nucleic acids into a host cell and culturing the cell to express the
CC protein. (I) proteins and polynucleotides may be used to prevent,
CC diagnose and treat immune/haematopoietic-related diseases, especially
CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC to AAK87694 represent human immune/haematopoietic antigen genomic
CC sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC represent sequences used in the exemplification of the present invention.

PT New protein from Neisseria gonorrheae, useful for the manufacture of a
PT medicament for treating or preventing N. gonorrheae infection -
XX
PS Disclosure; Page 502; 815pp; English.
XX
CC The present invention relates to proteins from Neisseria gonorrhoeae.
CC Also disclosed are the nucleic acid molecules encoding the proteins and
CC antibodies that specifically bind to the proteins. The composition
CC comprising the protein, nucleic acid or antibody is useful for the
CC manufacture of a medicament for treating or preventing N. gonorrhoeae
CC infection, this may be in the form of a vaccine or gene therapy.
CC Sequences given in records ABZ37706-ABZ42016 represent nucleic acid
CC molecules of the invention.

XX
PT   Nucleic acids encoding 3224 human nervous system antigen polypeptides,
PT   useful for preventing, diagnosing and/or treating nervous system
PT   cancers and metastases -
XX
PS   Disclosure; SEQ ID NO 7720; 1701pp + Sequence Listing; English.
XX
CC   The invention relates to novel genes (ABA11004-ABA21534) and proteins
CC   (ABB14678-ABB18001) useful for preventing, treating or ameliorating
CC   medical conditions e.g. by protein or gene therapy. The genes are
CC   isolated from a range of human tissues disclosed in the specification.
CC   The nucleic acids, proteins, antibodies and (ant)agonists are useful
CC   in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast
CC   and ovarian cancer and other cancers of the adrenal gland, bone, bone
CC   marrow, breast, gastrointestinal tract, liver, lung, or urogenital;
CC   (b) immune disorders e.g. Addison's disease, allergies, autoimmune
CC   haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's
CC   disease, multiple sclerosis, rheumatoid arthritis and ulcerative
CC   colitis; (c) cardiovascular disorders such as myocardial ischaemias;
CC   (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and
CC   epilepsy; and (f) infectious diseases such as viral, bacterial, fungal
CC   and parasitic infections.
CC   Note: The sequence data for this patent did not form part of the
CC   printed specification, but was obtained in electronic format directly
CC   from WIPO at ftp.wipo.int/pub/published_pct_sequences.

PT Polynucleotides encoding digestive system antigens, useful for
PT diagnosing, treating, preventing and/or prognozing disorders of the
PT digestive system, particularly cancer and cancer metastases -
XX
PS Disclosure; SEQ ID NO 3082; 986pp; English.
XX
CC The present invention provides the protein and coding sequences of a
CC number of human digestive system antigens. These can be used in the
CC diagnosis, treatment and prevention of digestive system disorders,
CC including cancer, Meckel's diverticulum, bacterial or parasitic
CC infections, appendicitis, Hirschsprung's disease, chronic colitis or
CC ulcerative colitis. The present sequence is a genomic DNA fragment
CC encoding a digestive system antigen of the invention.

PT   Identifying a compound that modulates an attention deficit
PT   hyperactivity disorder (ADHD) for treating e.g. ADHD or hypertension,
PT   comprises measuring a foraging behaviour an invertebrate -
XX
PS   Claim 89; Page 182-195; 246pp; English.
XX
CC   The present invention relates to a method of identifying a compound
CC   that modulates attention deficit hyperactivity disorder (ADHD) in
CC   a mammal. The method comprises administering a test compound to
CC   an invertebrate, and measuring a foraging behaviour of the
CC   invertebrate, where the compound that modulates the foraging behaviour
CC   of the invertebrate is characterised as a compound that modulates
CC   ADHD in a mammal. The compound identified by the new method of the
CC   invention is useful for diagnosing or treating ADHD, hypertension or
CC   other diseases associated with a nitric oxide/cGMP-dependent protein
CC   kinase network in a mammal, particularly humans. The method
CC   distinguishes a compound that has a specific effect on ADHD,
CC   hypertension or other diseases associated with a
CC   nitric oxide/cGMP-dependent kinase protein network
CC   in a mammal from a compound that has a non-specific effect. The
CC   present sequence represents a DNA sequence associated with
CC   invertebrate foraging behaviour.

PT   Amplifying nucleic acid for constructing artificial chromosomes,
PT   comprises introducing a DNA fragment into a cell to incorporate the DNA
PT   into a chromosome, and identifying cells with chromosomes that has
PT   undergone amplification  -
XX
PS   Disclosure; Page 76-94; 107pp; English.
XX
CC   The present invention relates to methods for amplifying nucleic acids
CC   in cells, for isolating artificial chromosomes, and preparing cell
CC   lines that contain artificial chromosomes. The methods comprise
CC   introducing a DNA fragment comprising a selectable marker into a cell,
CC   growing the cell under selective conditions to produce cells that have
CC   incorporated the DNA fragment or its portion into a chromosome, and
CC   identifying from among the resulting cells those that include a
CC   chromosome or its fragment with a portion that has undergone
```

```
CC   amplification. The invention also discloses cells and cell lines that
CC   contain the nucleic acids or artificial chromosomes. The methods of
CC   the invention are useful for amplifying nucleic acids in cells, in
CC   generating and isolating artificial chromosomes (e.g. mammalian
CC   artificial chromosomes or MACs), and in delivering the chromosomes
CC   to selected cells and tissues. The artificial chromosomes are useful
CC   in gene therapy, gene product production systems, production
CC   of humanised genetically transformed animal organs, production of
CC   transgenic plants and animals that would employ chromosomal elements as
CC   information storage vehicles, for analysis and study of centromere
CC   function, for the production of artificial chromosome vectors, and for
CC   the preparation of species-specific artificial chromosomes. The present
CC   sequence representing the human ribosomal RNA (rRNA) gene is used in
CC   the method of the present invention.
CC   Note: All N nucleotides (EXCEPT those at positions 21526-21527, 23183,
CC   24975-24977, 28699, 28945, 34074 and 34474) have been added to the
CC   sequence by the indexer to match the number of bases this sequence
CC   is listed to contain in the sequence listing.

PT   Haemophilus influenzae Rd genome recorded on computer readable
PT   medium  - useful for identifying commercially important nucleic acid
PT   fragments by homology searching
XX
PS   Claim 1; Page 77.2-77.1091; 1291pp; English.
XX
CC   This sequence represents the complete genome sequence of the bacterium
CC   Haemophilus influenzae strain Rd.  The invention relates to a computer
CC   readable medium (CRM) having recorded upon it the complete H.influenzae
CC   nucleotide sequence (I), a representative fragment of (I) or a nucleotide
CC   sequence at least 99% identical to (I).  By providing the full-length
CC   genomic sequence in a computer readable form, it is possible to identify
CC   commercially important nucleic acid fragments and expression modulating
CC   fragments (EMFs) of the Haemophilus genome. The EMFs can be used to
CC   regulate the expression of a nucleic acid molecule.  Vectors and altered
CC   organisms comprising the predicted ORFS can be used to produce any of the
CC   polypeptide fragments of the H. influenzae Rd genome.

PT   Determining the degree of cytosine methylation in genomic DNA, useful
PT   for diagnosis and prognosis, comprises selective hybridization of
PT   amplicons from chemically treated DNA  -
XX
PS   Claim 12; 56pp + Sequence Listing; 56pp; German.
XX
CC   This invention describes a novel method for determining the degree of
CC   methylation of a particular cytosine in a motif 5'-CpG-3', present in a
CC   genomic sample of DNA. The sample is treated chemically to convert
CC   cytosine (C) but not methylated C, to uracil, then part of the genomic
CC   DNA that contains the target C is amplified to form a labeled amplicon.
CC   The amplicon is hybridised to two classes, each with at least one
CC   member, of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers
CC   and the degree of hybridisation to both classes is determined from the
CC   label on the amplicon. From the ratio of labels hybridised to the two
CC   classes of oligomers, the degree of methylation is calculated. The method
CC   is used: (i) for diagnosis and/or prognosis of side effects of
CC   therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders
CC   of the central nervous, cardiovascular, gastrointestinal and respiratory
CC   systems etc., particularly by detecting mutations or single nucleotide
CC   polymorphisms (SNP's); and (ii) for differentiation of cell or tissue
CC   types and for investigating cell differentiation. The method allows the
CC   methylation status of many C residues to be determined simultaneously.
CC   ABQ13410-ABQ54121 represent genomic DNA sequences used to illustrate the
CC   method for determining the degree of cytosine methylation described in
CC   the disclosure of the invention.

CC   and the degree of hybridisation to both classes is determined from the
CC   label on the amplicon. From the ratio of labels hybridised to the two
CC   classes of oligomers, the degree of methylation is calculated. The method
CC   is used: (i) for diagnosis and/or prognosis of side effects of
CC   therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders
CC   of the central nervous, cardiovascular, gastrointestinal and respiratory
CC   systems etc., particularly by detecting mutations or single nucleotide
CC   polymorphisms (SNP's); and (ii) for differentiation of cell or tissue
CC   types and for investigating cell differentiation. The method allows the
CC   methylation status of many C residues to be determined simultaneously.
CC   ABQ13410-ABQ54121 represent genomic DNA sequences used to illustrate the
CC   method for determining the degree of cytosine methylation described in
CC   the disclosure of the invention.

PT   Determining the degree of cytosine methylation in genomic DNA, useful
PT   for diagnosis and prognosis, comprises selective hybridization of
PT   amplicons from chemically treated DNA  -
XX
PS   Claim 12; 56pp + Sequence Listing; 56pp; German.
XX
CC   This invention describes a novel method for determining the degree of
CC   methylation of a particular cytosine in a motif 5'-CpG-3', present in a
CC   genomic sample of DNA. The sample is treated chemically to convert
CC   cytosine (C) but not methylated C, to uracil, then part of the genomic
CC   DNA that contains the target C is amplified to form a labeled amplicon.
CC   The amplicon is hybridised to two classes, each with at least one
CC   member, of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers
CC   and the degree of hybridisation to both classes is determined from the
CC   label on the amplicon. From the ratio of labels hybridised to the two
CC   classes of oligomers, the degree of methylation is calculated. The method
CC   is used: (i) for diagnosis and/or prognosis of side effects of
CC   therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders
CC   of the central nervous, cardiovascular, gastrointestinal and respiratory
CC   systems etc., particularly by detecting mutations or single nucleotide
CC   polymorphisms (SNP's); and (ii) for differentiation of cell or tissue
CC   types and for investigating cell differentiation. The method allows the
CC   methylation status of many C residues to be determined simultaneously.

PT   Novel murine polynucleotides that individually identify novel genes
PT   into which a retroviral gene trap vector has been integrated, useful in
PT   genomic analysis and in discovery, development of therapeutic and
PT   diagnostic agents  -
XX
PS   Claim 2; SEQ ID NO 295; 29pp + Sequence Listing; English.
XX
CC   The invention relates to isolated murine polynucleotides (I) comprising a
CC   contiguous stretch of at least about 60 nucleotides of a sequence
CC   (ABQ96733-ABQ98191) chosen from 1461 OMNIBANK gene trapped sequences
CC   (GTSs). The novel genes can be used in a process to identify novel
CC   polynucleotide sequences by comparing them to the novel gene sequences.
CC   The novel genes and cells are useful in functional genomic analysis and
CC   in the discovery and development of new therapeutic and diagnostic agents
CC   and methods. (I) is useful for identifying the coding regions of the
CC   murine genome, to isolate cDNAs, genomic clones or full-length
CC   genes/polynucleotides or homologues, heterologues, paralogues or
CC   orthologues that are capable of hybridising to one or more of the GTSs
CC   under stringent conditions. (I) can be incorporated into a phage display
CC   system that can be used to screen for proteins or other ligands, that are
CC   capable of binding an amino acid sequence encoded by an oligonucleotide
CC   or polynucleotide sequence in at least one of the GTS sequences. (I) is
CC   useful in arrays, such as gene chips, to identify and characterise
CC   temporal and tissue specific gene expression, to identify the gene of
CC   interest from many sources and for genetic manipulations such as
CC   antisense inhibition and gene targeting. Decreasing the level of
CC   expression of (I) and/or down regulating the activity of peptides or
CC   proteins encoded by (I) is useful for treating development and cell
CC   differentiation disorders.
CC   Note: The sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from USPTO
CC   at sequdata.uspto.gov/sequence.html?DocID=20020081668.

PT   Novel murine polynucleotides that individually identify novel genes
PT   into which a retroviral gene trap vector has been integrated, useful in
```

```
PT   genomic analysis and in discovery, development of therapeutic and
PT   diagnostic agents -
XX
PS   Claim 2; SEQ ID NO 354; 29pp + Sequence Listing; English.
XX
CC   The invention relates to isolated murine polynucleotides (I) comprising a
CC   contiguous stretch of at least about 60 nucleotides of a sequence
CC   (ABQ96733-ABQ98191) chosen from 1461 OMNIBANK gene trapped sequences
CC   (GTSs). The novel genes can be used in a process to identify novel
CC   polynucleotide sequences by comparing them to the novel gene sequences.
CC   The novel genes and cells are useful in functional genomic analysis and
CC   in the discovery and development of new therapeutic and diagnostic agents
CC   and methods. (I) is useful for identifying the coding regions of the
CC   murine genome, to isolate cDNAs, genomic clones or full-length
CC   genes/polynucleotides or homologues, heterologues, paralogues or
CC   orthologues that are capable of hybridising to one or more of the GTSs
CC   under stringent conditions. (I) can be incorporated into a phage display
CC   system that can be used to screen for proteins or other ligands, that are
CC   capable of binding an amino acid sequence encoded by an oligonucleotide
CC   or polynucleotide sequence in at least one of the GTS sequences. (I) is
CC   useful in arrays, such as gene chips, to identify and characterise
CC   temporal and tissue specific gene expression, to identify the gene of
CC   interest from many sources and for genetic manipulations such as
CC   antisense inhibition and gene targeting. Decreasing the level of
CC   expression of (I) and/or down regulating the activity of peptides or
CC   proteins encoded by (I) is useful for treating development and cell
CC   differentiation disorders.
CC   Note: The sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from USPTO
CC   at sequdata.uspto.gov/sequence.html?DocID=20020081668.

PT   New isolated non-typeable Haemophilus influenzae BASB204 polypeptides
PT   useful as components of vaccines useful for treating bacterial
PT   infection such as otitis media, delayed speech learning, and
PT   inflammation of the middle ear -
XX
PS   Example 1; Fig 3; 97pp; English.
XX
CC   The invention relates to an isolated polypeptide comprising an amino acid
CC   sequence which has 85% identity to the entire length of a fully defined
CC   non-typeable Haemophilus influenzae BASB204 polypeptide sequence, given
CC   in specification. The isolated protein, an immunogenic fragment of the
CC   protein or an antibody immunospecific for the protein or immunogenic
CC   fragment is useful for diagnosing a non-typeable H. influenzae infection.
CC   The molecules may be used in the prevention of adhesion of Gram-negative
CC   or Gram-positive bacteria to mammalian extracellular matrix proteins in
CC   wounds, to block bacterial adhesion between mammalian extracellular
CC   matrix and bacterial BASB204 protein that mediate tissue damage and/or to
CC   block the normal progression of pathogenesis in infections initiated
CC   other than by the implantation of in-dwelling devices. The isolated
CC   protein encoding polynucleotide is useful as a research reagent and
CC   material for discovery of treatments of and diagnostics for diseases,
CC   particularly human diseases. The antibody of the invention is useful for
CC   treating infections preferably bacterial infections such as otitis media
CC   in infants and children, pneumonia in elders, sinusitis, nosocomial
CC   infections, or invasive diseases, chronic otitis media with hearing loss,
CC   fluid accumulation in the middle ear, auditive nerve damage, delayed
CC   speech learning, infections of the upper respiratory tract and
CC   inflammation of the middle ear. This polynucleotide sequence represents a
CC   Haemophilus influenzae BASB204 related nucleic acid of the invention.

PT Determining the degree of cytosine methylation in genomic DNA, useful
PT for diagnosis and prognosis, comprises selective hybridization of
PT amplicons from chemically treated DNA -
XX
PS Claim 12; 56pp + Sequence Listing; 56pp; German.
XX
CC This invention describes a novel method for determining the degree of
CC methylation of a particular cytosine in a motif 5'-CpG-3', present in a
CC genomic sample of DNA. The sample is treated chemically to convert
CC cytosine (C) but not methylated C, to uracil, then part of the genomic
CC DNA that contains the target C is amplified to form a labeled amplicon.
CC The amplicon is hybridised to two classes, each with at least one
CC member, of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers
CC and the degree of hybridisation to both classes is determined from the
CC label on the amplicon. From the ratio of labels hybridised to the two
CC classes of oligomers, the degree of methylation is calculated. The method
CC is used: (i) for diagnosis and/or prognosis of side effects of
CC therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders
CC of the central nervous, cardiovascular, gastrointestinal and respiratory
CC systems etc., particularly by detecting mutations or single nucleotide
CC polymorphisms (SNP's); and (ii) for differentiation of cell or tissue
CC types and for investigating cell differentiation. The method allows the
CC methylation status of many C residues to be determined simultaneously.
CC ABQ13410-ABQ54121 represent genomic DNA sequences used to illustrate the
CC method for determining the degree of cytosine methylation described in
CC the disclosure of the invention.

PT   Determining the degree of cytosine methylation in genomic DNA, useful
PT   for diagnosis and prognosis, comprises selective hybridization of
PT   amplicons from chemically treated DNA  -
XX
PS   Claim 12; 56pp + Sequence Listing; 56pp; German.
XX
CC   This invention describes a novel method for determining the degree of
CC   methylation of a particular cytosine in a motif 5'-CpG-3', present in a
CC   genomic sample of DNA. The sample is treated chemically to convert
CC   cytosine (C) but not methylated C, to uracil, then part of the genomic
CC   DNA that contains the target C is amplified to form a labeled amplicon.
CC   The amplicon is hybridised to two classes, each with at least one
CC   member, of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers
CC   and the degree of hybridisation to both classes is determined from the
CC   label on the amplicon. From the ratio of labels hybridised to the two
CC   classes of oligomers, the degree of methylation is calculated. The method
CC   is used: (i) for diagnosis and/or prognosis of side effects of
CC   therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders
CC   of the central nervous, cardiovascular, gastrointestinal and respiratory
CC   systems etc., particularly by detecting mutations or single nucleotide
CC   polymorphisms (SNP's); and (ii) for differentiation of cell or tissue
CC   types and for investigating cell differentiation. The method allows the
CC   methylation status of many C residues to be determined simultaneously.
CC   ABQ13410-ABQ54121 represent genomic DNA sequences used to illustrate the
CC   method for determining the degree of cytosine methylation described in
CC   the disclosure of the invention.

XX
CC   The present invention provides the protein and coding sequences of a
CC   number of human reproductive system related antigens. These can be used
CC   in the prevention and treatment of reproductive system disorders,
CC   including cancer. The present sequence is a genomic sequence encoding a
CC   protein of the invention.

XX
PT   Novel murine polynucleotides that individually identify novel genes
PT   into which a retroviral gene trap vector has been integrated, useful in
PT   genomic analysis and in discovery, development of therapeutic and
PT   diagnostic agents
XX
PS   Claim 2; SEQ ID NO 736; 29pp + Sequence Listing; English.
XX
CC   The invention relates to isolated murine polynucleotides (I) comprising a
CC   contiguous stretch of at least about 60 nucleotides of a sequence
CC   (ABQ96733-ABQ98191) chosen from 1461 OMNIBANK gene trapped sequences
CC   (GTSs). The novel genes can be used in a process to identify novel
CC   polynucleotide sequences by comparing them to the novel gene sequences.
CC   The novel genes and cells are useful in functional genomic analysis and
CC   in the discovery and development of new therapeutic and diagnostic agents
CC   and methods. (I) is useful for identifying the coding regions of the
CC   murine genome, to isolate cDNAs, genomic clones or full-length
CC   genes/polynucleotides or homologues, heterologues, paralogues or
CC   orthologues that are capable of hybridising to one or more of the GTSs
CC   under stringent conditions. (I) can be incorporated into a phage display
CC   system that can be used to screen for proteins or other ligands, that are
CC   capable of binding an amino acid sequence encoded by an oligonucleotide
CC   or polynucleotide sequence in at least one of the GTS sequences. (I) is
CC   useful in arrays, such as gene chips, to identify and characterise
CC   temporal and tissue specific gene expression, to identify the gene of
CC   interest from many sources and for genetic manipulations such as
CC   antisense inhibition and gene targeting. Decreasing the level of
CC   expression of (I) and/or down regulating the activity of peptides or
CC   proteins encoded by (I) is useful for treating development and cell
CC   differentiation disorders.
CC   Note: The sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from USPTO
CC   at sequdata.uspto.gov/sequence.html?DocID=20020081668.

PT Nucleic acids encoding 3224 human nervous system antigen polypeptides,
PT useful for preventing, diagnosing and/or treating nervous system
PT cancers and metastases -
XX
PS Disclosure; SEQ ID NO 11910; 1701pp + Sequence Listing; English.
XX
CC The invention relates to novel genes (ABA11004-ABA21534) and proteins
CC (ABB14678-ABB18001) useful for preventing, treating or ameliorating
CC medical conditions e.g. by protein or gene therapy. The genes are
CC isolated from a range of human tissues disclosed in the specification.
CC The nucleic acids, proteins, antibodies and (ant)agonists are useful
CC in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast
CC and ovarian cancer and other cancers of the adrenal gland, bone, bone
CC marrow, breast, gastrointestinal tract, liver, lung, or urogenital;
CC (b) immune disorders e.g. Addison's disease, allergies, autoimmune
CC haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's
CC disease, multiple sclerosis, rheumatoid arthritis and ulcerative
CC colitis; (c) cardiovascular disorders such as myocardial ischaemias;
CC (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and
CC epilepsy; and (f) infectious diseases such as viral, bacterial, fungal
CC and parasitic infections.
CC Note: The sequence data for this patent did not form part of the
CC printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pct_sequences.

PT   Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
PT   useful for preventing, diagnosing and/or treating cancers and
PT   metastasis -
XX
PS   Disclosure; SEQ ID NO 26562; 3071pp + Sequence Listing; English.
XX
CC   AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC   amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC   activity, and can be used in gene therapy and vaccine production. (I)
CC   proteins and polynucleotides may be used in the prevention, diagnosis and
CC   treatment of diseases associated with inappropriate (I) expression. For
CC   example, they may be used to treat disorders associated with decreased
CC   expression by rectifying mutations or deletions in a patient's genome
CC   that affect the activity of (I) by expressing inactive proteins or to
CC   supplement the patients own production of (I). Additionally, (I)
CC   polynucleotides may be used to produce the secreted (I), by inserting
CC   the nucleic acids into a host cell and culturing the cell to express the
CC   protein. (I) proteins and polynucleotides may be used to prevent,
CC   diagnose and treat immune/haematopoietic-related diseases, especially
CC   cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC   to AAK87694 represent human immune/haematopoietic antigen genomic
CC   sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC   represent sequences used in the exemplification of the present invention.

XX
PT   Novel murine polynucleotides that individually identify novel genes
PT   into which a retroviral gene trap vector has been integrated, useful in
PT   genomic analysis and in discovery, development of therapeutic and
PT   diagnostic agents -
XX
PS   Claim 2; SEQ ID NO 325; 29pp + Sequence Listing; English.
XX
CC   The invention relates to isolated murine polynucleotides (I) comprising a
CC   contiguous stretch of at least about 60 nucleotides of a sequence
CC   (ABQ96733-ABQ98191) chosen from 1461 OMNIBANK gene trapped sequences
CC   (GTSs). The novel genes can be used in a process to identify novel
CC   polynucleotide sequences by comparing them to the novel gene sequences.
CC   The novel genes and cells are useful in functional genomic analysis and
CC   in the discovery and development of new therapeutic and diagnostic agents
CC   and methods. (I) is useful for identifying the coding regions of the
CC   murine genome, to isolate cDNAs, genomic clones or full-length
CC   genes/polynucleotides or homologues, heterologues, paralogues or
CC   orthologues that are capable of hybridising to one or more of the GTSs
CC   under stringent conditions. (I) can be incorporated into a phage display
CC   system that can be used to screen for proteins or other ligands, that are
CC   capable of binding an amino acid sequence encoded by an oligonucleotide
CC   or polynucleotide sequence in at least one of the GTS sequences. (I) is
CC   useful in arrays, such as gene chips, to identify and characterise
CC   temporal and tissue specific gene expression, to identify the gene of
```

```
CC   interest from many sources and for genetic manipulations such as
CC   antisense inhibition and gene targeting. Decreasing the level of
CC   expression of (I) and/or down regulating the activity of peptides or
CC   proteins encoded by (I) is useful for treating development and cell
CC   differentiation disorders.
CC   Note: The sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from USPTO
CC   at sequdata.uspto.gov/sequence.html?DocID=20020081668.

PT   Nucleic acids encoding 3224 human nervous system antigen polypeptides,
PT   useful for preventing, diagnosing and/or treating nervous system
PT   cancers and metastases -
XX
PS   Disclosure; SEQ ID NO 11909; 1701pp + Sequence Listing; English.
XX
CC   The invention relates to novel genes (ABA11004-ABA21534) and proteins
CC   (ABB14678-ABB18001) useful for preventing, treating or ameliorating
CC   medical conditions e.g. by protein or gene therapy. The genes are
CC   isolated from a range of human tissues disclosed in the specification.
CC   The nucleic acids, proteins, antibodies and (ant)agonists are useful
CC   in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast
CC   and ovarian cancer and other cancers of the adrenal gland, bone, bone
CC   marrow, breast, gastrointestinal tract, liver, lung, or urogenital;
CC   (b) immune disorders e.g. Addison's disease, allergies, autoimmune
CC   haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's
CC   disease, multiple sclerosis, rheumatoid arthritis and ulcerative
CC   colitis; (c) cardiovascular disorders such as myocardial ischaemias;
CC   (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and
CC   epilepsy; and (f) infectious diseases such as viral, bacterial, fungal
CC   and parasitic infections.
CC   Note: The sequence data for this patent did not form part of the
CC   printed specification, but was obtained in electronic format directly
CC   from WIPO at ftp.wipo.int/pub/published_pct_sequences.

CC   AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC   amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC   activity, and can be used in gene therapy and vaccine production. (I)
CC   proteins and polynucleotides may be used in the prevention, diagnosis and
CC   treatment of diseases associated with inappropriate (I) expression. For
CC   example, they may be used to treat disorders associated with decreased
CC   expression by rectifying mutations or deletions in a patient's genome
CC   that affect the activity of (I) by expressing inactive proteins or to
CC   supplement the patients own production of (I). Additionally, (I)
CC   polynucleotides may be used to produce the secreted (I), by inserting
CC   the nucleic acids into a host cell and culturing the cell to express the
CC   protein. (I) proteins and polynucleotides may be used to prevent,
CC   diagnose and treat immune/haematopoietic-related diseases, especially
CC   cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC   to AAK87694 represent human immune/haematopoietic antigen genomic
CC   sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC   represent sequences used in the exemplification of the present invention.

PT   Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
PT   useful for preventing, diagnosing and/or treating cancers and
PT   metastasis -
XX
PS   Disclosure; SEQ ID NO 26561; 3071pp + Sequence Listing; English.
XX
CC   AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC   amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC   activity, and can be used in gene therapy and vaccine production. (I)
CC   proteins and polynucleotides may be used in the prevention, diagnosis and
CC   treatment of diseases associated with inappropriate (I) expression. For
CC   example, they may be used to treat disorders associated with decreased
CC   expression by rectifying mutations or deletions in a patient's genome
CC   that affect the activity of (I) by expressing inactive proteins or to
CC   supplement the patients own production of (I). Additionally, (I)
CC   polynucleotides may be used to produce the secreted (I), by inserting
CC   the nucleic acids into a host cell and culturing the cell to express the
CC   protein. (I) proteins and polynucleotides may be used to prevent,
CC   diagnose and treat immune/haematopoietic-related diseases, especially
CC   cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC   to AAK87694 represent human immune/haematopoietic antigen genomic
CC   sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC   represent sequences used in the exemplification of the present invention.

XX
PT   Novel murine polynucleotides that individually identify novel genes
PT   into which a retroviral gene trap vector has been integrated, useful in
PT   genomic analysis and in discovery, development of therapeutic and
PT   diagnostic agents -
XX
PS   Claim 2; SEQ ID NO 250; 29pp + Sequence Listing; English.
XX
CC   The invention relates to isolated murine polynucleotides (I) comprising a
CC   contiguous stretch of at least about 60 nucleotides of a sequence
CC   (ABQ96733-ABQ98191) chosen from 1461 OMNIBANK gene trapped sequences
CC   (GTSs). The novel genes can be used in a process to identify novel
CC   polynucleotide sequences by comparing them to the novel gene sequences.
CC   The novel genes and cells are useful in functional genomic analysis and
CC   in the discovery and development of new therapeutic and diagnostic agents
CC   and methods. (I) is useful for identifying the coding regions of the
CC   murine genome, to isolate cDNAs, genomic clones or full-length
CC   genes/polynucleotides or homologues, heterologues, paralogues or
CC   orthologues that are capable of hybridising to one or more of the GTSs
CC   under stringent conditions. (I) can be incorporated into a phage display
CC   system that can be used to screen for proteins or other ligands, that are
CC   capable of binding an amino acid sequence encoded by an oligonucleotide
CC   or polynucleotide sequence in at least one of the GTS sequences. (I) is
CC   useful in arrays, such as gene chips, to identify and characterise
CC   temporal and tissue specific gene expression, to identify the gene of
CC   interest from many sources and for genetic manipulations such as
CC   antisense inhibition and gene targeting. Decreasing the level of
CC   expression of (I) and/or down regulating the activity of peptides or
CC   proteins encoded by (I) is useful for treating development and cell
CC   differentiation disorders.
CC   Note: The sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from USPTO
CC   at sequdata.uspto.gov/sequence.html?DocID=20020081668.

PT   Novel murine polynucleotides that individually identify novel genes
PT   into which a retroviral gene trap vector has been integrated, useful in
PT   genomic analysis and in discovery, development of therapeutic and
PT   diagnostic agents -
XX
PS   Claim 2; SEQ ID NO 246; 29pp + Sequence Listing; English.
XX
CC   The invention relates to isolated murine polynucleotides (I) comprising a
CC   contiguous stretch of at least about 60 nucleotides of a sequence
CC   (ABQ96733-ABQ98191) chosen from 1461 OMNIBANK gene trapped sequences
CC   (GTSs). The novel genes can be used in a process to identify novel
CC   polynucleotide sequences by comparing them to the novel gene sequences.
CC   The novel genes and cells are useful in functional genomic analysis and
CC   in the discovery and development of new therapeutic and diagnostic agents
CC   and methods. (I) is useful for identifying the coding regions of the
CC   murine genome, to isolate cDNAs, genomic clones or full-length
CC   genes/polynucleotides or homologues, heterologues, paralogues or
CC   orthologues that are capable of hybridising to one or more of the GTSs
CC   under stringent conditions. (I) can be incorporated into a phage display
CC   system that can be used to screen for proteins or other ligands, that are
CC   capable of binding an amino acid sequence encoded by an oligonucleotide
CC   or polynucleotide sequence in at least one of the GTS sequences. (I) is
CC   useful in arrays, such as gene chips, to identify and characterise
CC   temporal and tissue specific gene expression, to identify the gene of
CC   interest from many sources and for genetic manipulations such as
```

```
CC   antisense inhibition and gene targeting. Decreasing the level of
CC   expression of (I) and/or down regulating the activity of peptides or
CC   proteins encoded by (I) is useful for treating development and cell
CC   differentiation disorders.

PT   New polynucleotides encoding human secreted proteins - derived from
PT   e.g. human blood, kidney, foetal lung, placenta, testes, brain,
PT   ovary, pituitary, retina and colon cDNA libraries
XX
PS   Claim 1; Page 458; 641pp; English.
XX
CC   The present sequence represents an expressed sequence tag (EST), and is
CC   a polynucleotide of the invention. The polynucleotides of the invention
CC   are all secreted EST sequences isolated from a variety of human tissue
CC   sources. The EST sequences and proteins encoded by them are predicted to
CC   have useful biological activities which would make them suitable for
CC   treating, preventing or ameliorating medical conditions in humans and
CC   animals, although no supporting data is given. Suggested activities
CC   include nutritional activity, immune stimulating or suppressing activity,
CC   haematopoiesis regulating activity, tissue growth activity,
CC   activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic
CC   and thrombolytic activity, receptor/ligand activity, anti-inflammatory
CC   activity, cadherin/tumour invasion suppressor activity, tumour inhibition
CC   activity. The EST sequences are also stated to be useful for gene
CC   therapy.

CC AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC activity, and can be used in gene therapy and vaccine production. (I)
CC proteins and polynucleotides may be used in the prevention, diagnosis and
CC treatment of diseases associated with inappropriate (I) expression. For
CC example, they may be used to treat disorders associated with decreased
CC expression by rectifying mutations or deletions in a patient's genome
CC that affect the activity of (I) by expressing inactive proteins or to
CC supplement the patients own production of (I). Additionally, (I)
CC polynucleotides may be used to produce the secreted (I), by inserting
CC the nucleic acids into a host cell and culturing the cell to express the
CC protein. (I) proteins and polynucleotides may be used to prevent,
CC diagnose and treat immune/haematopoietic-related diseases, especially
CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC to AAK87694 represent human immune/haematopoietic antigen genomic

```
CC   sequences from the present invention. AAK54942 to AAK54950 and AAM82169

PT   New isolated non-typeable Haemophilus influenzae BASB204 polypeptides
PT   useful as components of vaccines useful for treating bacterial
PT   infection such as otitis media, delayed speech learning, and
PT   inflammation of the middle ear  -
XX
PS   Example 2; Fig 3; 97pp; English.
XX
CC   The invention relates to an isolated polypeptide comprising an amino acid
CC   sequence which has 85% identity to the entire length of a fully defined
CC   non-typeable Haemophilus influenzae BASB204 polypeptide sequence, given
CC   in specification. The isolated protein, an immunogenic fragment of the
CC   protein or an antibody immunospecific for the protein or immunogenic
CC   fragment is useful for diagnosing a non-typeable H. influenzae infection.
CC   The molecules may be used in the prevention of adhesion of Gram-negative
CC   or Gram-positive bacteria to mammalian extracellular matrix proteins in
CC   wounds, to block bacterial adhesion between mammalian extracellular
CC   matrix and bacterial BASB204 protein that mediate tissue damage and/or to
CC   block the normal progression of pathogenesis in infections initiated
CC   other than by the implantation of in-dwelling devices. The isolated
CC   protein encoding polynucleotide is useful as a research reagent and
CC   material for discovery of treatments of and diagnostics for diseases,
CC   particularly human diseases. The antibody of the invention is useful for
CC   treating infections preferably bacterial infections such as otitis media
CC   in infants and children, pneumonia in elders, sinusitis, nosocomial
CC   infections, or invasive diseases, chronic otitis media with hearing loss,
CC   fluid accumulation in the middle ear, auditive nerve damage, delayed
CC   speech learning, infections of the upper respiratory tract and
CC   inflammation of the middle ear. This polynucleotide sequence represents a
CC   Haemophilus influenzae BASB204 related nucleic acid of the invention.

PT   New isolated polynucleotide and encoded polypeptides, useful in
PT   diagnostics, forensics, gene mapping, identification of mutations
PT   responsible for genetic disorders or other traits and to assess
PT   biodiversity
XX
PS   Claim 1; SEQ ID No 12308; 103pp; English.
XX
CC   The invention relates to isolated polynucleotide (I) and
CC   polypeptide (II) sequences. (I) is useful as hybridisation probes,
CC   polymerase chain reaction (PCR) primers, oligomers, and for chromosome
CC   and gene mapping, and in recombinant production of (II). The
CC   polynucleotides are also used in diagnostics as expressed sequence tags
CC   for identifying expressed genes. (I) is useful in gene therapy techniques
CC   to restore normal activity of (II) or to treat disease states involving
CC   (II). (II) is useful for generating antibodies against it, detecting or
CC   quantitating a polypeptide in tissue, as molecular weight markers and as
CC   a food supplement. (II) and its binding partners are useful in medical
CC   imaging of sites expressing (II). (I) and (II) are useful for treating
CC   disorders involving aberrant protein expression or biological activity.
CC   The polypeptide and polynucleotide sequences have applications in
CC   diagnostics, forensics, gene mapping, identification of mutations
CC   responsible for genetic disorders or other traits to assess biodiversity
CC   and to produce other types of data and products dependent on DNA and
CC   amino acid sequences. AAS64197-AAS94564 represent novel human
CC   diagnostic coding sequences of the invention.
CC   Note: The sequence data for this patent did not appear in the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences.

PT Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
PT useful for preventing, diagnosing and/or treating cancers and
PT metastasis - .
XX
PS Disclosure; SEQ ID NO 40658; 3071pp + Sequence Listing; English.
XX
CC AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC activity, and can be used in gene therapy and vaccine production. (I)
CC proteins and polynucleotides may be used in the prevention, diagnosis and
CC treatment of diseases associated with inappropriate (I) expression. For
CC example, they may be used to treat disorders associated with decreased
CC expression by rectifying mutations or deletions in a patient's genome
CC that affect the activity of (I) by expressing inactive proteins or to
CC supplement the patients own production of (I). Additionally, (I)
CC polynucleotides may be used to produce the secreted (I), by inserting
CC the nucleic acids into a host cell and culturing the cell to express the
CC protein. (I) proteins and polynucleotides may be used to prevent,
CC diagnose and treat immune/haematopoietic-related diseases, especially
CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC to AAK87694 represent human immune/haematopoietic antigen genomic
CC sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC represent sequences used in the exemplification of the present invention.

PT   Fragments of chemically modified genes associated with tumour suppressor
PT   genes and oncogenes, useful in designing primers and probes for
PT   analysing diseases associated with cytosine methylation state e.g.
PT   cancer -
XX
PS   Claim 1; SEQ ID No 314; 27pp; English.
XX
CC   The invention relates to a nucleic acid comprising a sequence of 18
CC   bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with
CC   bisulphite, of genes associated with tumour suppression and
CC   oncogenes having a sequence taken from 536 (actually 533 since
CC   numbers 408, 458 and 500 are missing from the sequence listing) sequences
CC   (Ss) and sequences complementary to (Ss). The nucleic acid may be a
CC   peptide nucleic acid-oligomer (PNA) of at least 9 nucleotides and may
CC   form part of a set of probes for detecting the cytosine methylation state
CC   and/or single nucleotide polymorphisms and also to be used in an
CC   array for analysing diseases associated with CpG dinucleotides e.g.
CC   cancers and tumours. The probes can also be used in a method for
CC   ascertaining genetic and/or epigenetic parameters for the diagnosis
CC   and/or therapy of existing diseases or the predisposition to specific
CC   diseases, by analysing cytosine methylations. The parameters may be
CC   compared to another set of genetic and/or epigenetic parameters, the
CC   differences serving as basis for diagnosis and/or prognosis events which
CC   are disadvantageous to patients. The present sequence is one of the
CC   533 genomic sequences derived from tumour suppressor genes and
CC   oncogenes. Sequences with even numbered Seq ID numbers are the
CC   complementary sequence of the corresponding odd numbered sequence (e.g.
CC   ID 2 and ID1, ID 536 and ID 535, except for those whose partner sequence
CC   is missing).
CC   Note: The sequence data for this patent did not form part
CC   of the printed specification, but was obtained in electronic
CC   format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences.

PT   New isolated polynucleotide and encoded polypeptides, useful in
PT   diagnostics, forensics, gene mapping, identification of mutations
PT   responsible for genetic disorders or other traits and to assess
PT   biodiversity -
XX
PS   Claim 1; SEQ ID No 6707; 103pp; English.
XX
CC   The invention relates to isolated polynucleotide (I) and
CC   polypeptide (II) sequences. (I) is useful as hybridisation probes,
CC   polymerase chain reaction (PCR) primers, oligomers, and for chromosome
CC   and gene mapping, and in recombinant production of (II). The
CC   polynucleotides are also used in diagnostics as expressed sequence tags
CC   for identifying expressed genes. (I) is useful in gene therapy techniques
CC   to restore normal activity of (II) or to treat disease states involving
CC   (II). (II) is useful for generating antibodies against it, detecting or
CC   quantitating a polypeptide in tissue, as molecular weight markers and as
CC   a food supplement. (II) and its binding partners are useful in medical
CC   imaging of sites expressing (II). (I) and (II) are useful for treating
CC   disorders involving aberrant protein expression or biological activity.
CC   The polypeptide and polynucleotide sequences have applications in
CC   diagnostics, forensics, gene mapping, identification of mutations
CC   responsible for genetic disorders or other traits to assess biodiversity
CC   and to produce other types of data and products dependent on DNA and
CC   amino acid sequences. AAS64197-AAS94564 represent novel human
CC   diagnostic coding sequences of the invention.
CC   Note: The sequence data for this patent did not appear in the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences.

XX
PT   Novel murine polynucleotides that individually identify novel genes
PT   into which a retroviral gene trap vector has been integrated, useful in
PT   genomic analysis and in discovery, development of therapeutic and
PT   diagnostic agents  -
XX
PS   Claim 2; SEQ ID NO 465; 29pp + Sequence Listing; English.
XX
CC   The invention relates to isolated murine polynucleotides (I) comprising a
CC   contiguous stretch of at least about 60 nucleotides of a sequence
CC   (ABQ96733-ABQ98191) chosen from 1461 OMNIBANK gene trapped sequences
CC   (GTSs). The novel genes can be used in a process to identify novel
```

```
CC   polynucleotide sequences by comparing them to the novel gene sequences.
CC   The novel genes and cells are useful in functional genomic analysis and
CC   in the discovery and development of new therapeutic and diagnostic agents
CC   and methods. (I) is useful for identifying the coding regions of the
CC   murine genome, to isolate cDNAs, genomic clones or full-length
CC   genes/polynucleotides or homologues, heterologues, paralogues or
CC   orthologues that are capable of hybridising to one or more of the GTSs
CC   under stringent conditions. (I) can be incorporated into a phage display
CC   system that can be used to screen for proteins or other ligands, that are
CC   capable of binding an amino acid sequence encoded by an oligonucleotide
CC   or polynucleotide sequence in at least one of the GTS sequences. (I) is
CC   useful in arrays, such as gene chips, to identify and characterise
CC   temporal and tissue specific gene expression, to identify the gene of
CC   interest from many sources and for genetic manipulations such as
CC   antisense inhibition and gene targeting. Decreasing the level of
CC   expression of (I) and/or down regulating the activity of peptides or
CC   proteins encoded by (I) is useful for treating development and cell
CC   differentiation disorders.
CC   Note: The sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from USPTO
CC   at sequdata.uspto.gov/sequence.html?DocID=20020081668.

PT   New isolated non-typeable Haemophilus influenzae BASB204 polypeptides
PT   useful as components of vaccines useful for treating bacterial
PT   infection such as otitis media, delayed speech learning, and
PT   inflammation of the middle ear
XX
PS   Example 2; Fig 3; 97pp; English.
XX
CC   The invention relates to an isolated polypeptide comprising an amino acid
CC   sequence which has 85% identity to the entire length of a fully defined
CC   non-typeable Haemophilus influenzae BASB204 polypeptide sequence, given
CC   in specification. The isolated protein, an immunogenic fragment of the
CC   protein or an antibody immunospecific for the protein or immunogenic
CC   fragment is useful for diagnosing a non-typeable H. influenzae infection.
CC   The molecules may be used in the prevention of adhesion of Gram-negative
CC   or Gram-positive bacteria to mammalian extracellular matrix proteins in
CC   wounds, to block bacterial adhesion between mammalian extracellular
CC   matrix and bacterial BASB204 protein that mediate tissue damage and/or to
CC   block the normal progression of pathogenesis in infections initiated
CC   other than by the implantation of in-dwelling devices. The isolated
CC   protein encoding polynucleotide is useful as a research reagent and
CC   material for discovery of treatments of and diagnostics for diseases,
CC   particularly human diseases. The antibody of the invention is useful for
CC   treating infections preferably bacterial infections such as otitis media
CC   in infants and children, pneumonia in elders, sinusitis, nosocomial
CC   infections, or invasive diseases, chronic otitis media with hearing loss,
CC   fluid accumulation in the middle ear, auditive nerve damage, delayed
CC   speech learning, infections of the upper respiratory tract and
CC   inflammation of the middle ear. This polynucleotide sequence represents a
CC   Haemophilus influenzae BASB204 related nucleic acid of the invention.

CC non-typeable Haemophilus influenzae BASB204 polypeptide sequence, given
CC in specification. The isolated protein, an immunogenic fragment of the
CC protein or an antibody immunospecific for the protein or immunogenic
CC fragment is useful for diagnosing a non-typeable H. influenzae infection.
CC The molecules may be used in the prevention of adhesion of Gram-negative
CC or Gram-positive bacteria to mammalian extracellular matrix proteins in
CC wounds, to block bacterial adhesion between mammalian extracellular
CC matrix and bacterial BASB204 protein that mediate tissue damage and/or to
CC block the normal progression of pathogenesis in infections initiated
CC other than by the implantation of in-dwelling devices. The isolated
CC protein encoding polynucleotide is useful as a research reagent and
CC material for discovery of treatments of and diagnostics for diseases,
CC particularly human diseases. The antibody of the invention is useful for
CC treating infections preferably bacterial infections such as otitis media
CC in infants and children, pneumonia in elders, sinusitis, nosocomial
CC infections, or invasive diseases, chronic otitis media with hearing loss,
CC fluid accumulation in the middle ear, auditive nerve damage, delayed
CC speech learning, infections of the upper respiratory tract and
CC inflammation of the middle ear. This polynucleotide sequence represents a
CC Haemophilus influenzae BASB204 related nucleic acid of the invention.

PT   Fragments of chemically modified genes associated with tumour suppressor
PT   genes and oncogenes, useful in designing primers and probes for
PT   analysing diseases associated with cytosine methylation state e.g.
PT   cancer  -
XX
PS   Claim 1; SEQ ID No 144; 27pp; English.
XX
CC   The invention relates to a nucleic acid comprising a sequence of 18
CC   bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with
CC   bisulphite, of genes associated with tumour suppression and
CC   oncogenes having a sequence taken from 536 (actually 533 since
CC   numbers 408, 458 and 500 are missing from the sequence listing) sequences
CC   (Ss) and sequences complementary to (Ss). The nucleic acid may be a
CC   peptide nucleic acid-oligomer (PNA) of at least 9 nucleotides and may
CC   form part of a set of probes for detecting the cytosine methylation state
```

```
CC   and/or single nucleotide polymorphisms and also to be used in an
CC   array for analysing diseases associated with CpG dinucleotides e.g.
CC   cancers and tumours. The probes can also be used in a method for
CC   ascertaining genetic and/or epigenetic parameters for the diagnosis
CC   and/or therapy of existing diseases or the predisposition to specific
CC   diseases, by analysing cytosine methylations. The parameters may be
CC   compared to another set of genetic and/or epigenetic parameters, the
CC   differences serving as basis for diagnosis and/or prognosis events which
CC   are disadvantageous to patients. The present sequence is one of the
CC   533 genomic sequences derived from tumour suppressor genes and
CC   oncogenes. Sequences with even numbered Seq ID numbers are the
CC   complementary sequence of the corresponding odd numbered sequence (e.g.
CC   ID 2 and ID1, ID 536 and ID 535, except for those whose partner sequence
CC   is missing).
CC   Note: The sequence data for this patent did not form part
CC   of the printed specification, but was obtained in electronic
CC   format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences.

PT   New protein from Neisseria gonorrheae, useful for the manufacture of a
PT   medicament for treating or preventing N. gonorrheae infection -
XX
PS   Disclosure; Page 637; 815pp; English.
XX
CC   The present invention relates to proteins from Neisseria gonorrhoeae.
CC   Also disclosed are the nucleic acid molecules encoding the proteins and
CC   antibodies that specifically bind to the proteins. The composition
CC   comprising the protein, nucleic acid or antibody is useful for the
CC   manufacture of a medicament for treating or preventing N. gonorrhoeae
CC   infection, this may be in the form of a vaccine or gene therapy.
CC   Sequences given in records ABZ37706-ABZ42016 represent nucleic acid
CC   molecules of the invention.

PA (HUMA-) HUMAN GENOME SCI INC.
XX
PI Rosen CA, Barash SC, Ruben SM;
XX
DR WPI; 2001-451937/48.
XX
PT Isolated polypeptide for treating, preventing and/ or prognosing
PT disorders related to the musculoskeletal system including
PT musculoskeletal cancers and also for testing and detection e.g.
PT diagnosis -

```
XX
PS   Example 2; SEQ ID NO 3185; 781pp + Sequence Listing; English.
XX
CC   The invention relates to novel genes (AAL34669-AAL37666) and proteins
CC   (ABB03087-ABB04109) associated with the musculoskeletal system useful
CC   for preventing, treating or ameliorating medical conditions e.g. by
CC   protein or gene therapy. The genes are isolated from a range of human
CC   tissues disclosed in the specification. The nucleic acids, proteins,
CC   antibodies and (ant)agonists are useful in the diagnosis, treatment
CC   and prevention of: (a) cancer, e.g. breast and ovarian cancer and
CC   other cancers of the adrenal gland, bone, bone marrow, breast,
CC   gastrointestinal tract, liver, lung, or urogenital; (b) immune
CC   disorders e.g. Addison's disease, allergies, autoimmune haemolytic
CC   anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease,
CC   multiple sclerosis, rheumatoid arthritis and ulcerative colitis;
CC   (c) cardiovascular disorders such as myocardial ischaemias; (d) wound
CC   healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy;
CC   and (f) infectious diseases such as viral, bacterial, fungal and
CC   parasitic infections.
CC   Note: The sequence data for this patent did not form part of the
CC   printed specification, but was obtained in electronic format directly
CC   from WIPO at ftp.wipo.int/pub/published_pct_sequences.

PT Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
PT useful for preventing, diagnosing and/or treating cancers and
PT metastasis -
XX
PS Disclosure; SEQ ID NO 19618; 3071pp + Sequence Listing; English.
XX
CC AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC activity, and can be used in gene therapy and vaccine production. (I)
CC proteins and polynucleotides may be used in the prevention, diagnosis and
CC treatment of diseases associated with inappropriate (I) expression. For
CC example, they may be used to treat disorders associated with decreased
CC expression by rectifying mutations or deletions in a patient's genome
CC that affect the activity of (I) by expressing inactive proteins or to
CC supplement the patients own production of (I). Additionally, (I)
CC polynucleotides may be used to produce the secreted (I), by inserting
CC the nucleic acids into a host cell and culturing the cell to express the
CC protein. (I) proteins and polynucleotides may be used to prevent,
CC diagnose and treat immune/haematopoietic-related diseases, especially
CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC to AAK87694 represent human immune/haematopoietic antigen genomic
CC sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC represent sequences used in the exemplification of the present invention.

PT   Isolated nucleic acid molecules encoding musculoskeletal system
PT   associated polypeptides, useful for detecting disorders, e.g. cancer -
XX
PS   Disclosure; SEQ ID NO 3185; 321pp; English.
XX
CC   The invention describes an isolated nucleic acid molecule comprising a
CC   sequence encoding musculoskeletal system associated polypeptides useful
CC   for detecting disorders, e.g., cancer or cancer metastases, in animals
CC   or humans. The nucleic acid: stimulates re-vascularisation of ischaemic
CC   tissues associated with conditions such as thrombosis, arteriosclerosis,
CC   and other cardiovascular conditions; treats wounds due to injuries,
CC   burns, post-operative tissue repair, and ulcers; stimulates angiogenesis
CC   and limb regeneration; stimulates neuronal growth; can treat and prevent
CC   neuronal damage occurring in certain disorders or neurodegenerative
CC   conditions, such as, Alzheimer's disease, Parkinson's disease, and
CC   AIDS-related complex; stimulates chondrocyte growth, thus they can be
CC   used to enhance bone and periodontal regeneration and aid in tissue
CC   transports or bone grafts; prevents skin aging due to sunburn by
CC   stimulating keratinocyte growth; prevents hair loss, since FGF family
CC   members activate hair-forming cells and promotes melanocyte growth;
CC   stimulates growth and differentiation of hematopoietic cells and bone
CC   marrow cells when used in combination with other cytokines; maintains
CC   organs before transplantation or for supporting cell culture of primary
CC   tissues; induces tissue of mesodermal origin to differentiate in early
CC   embryos; increases or decreases the differentiation or proliferation of
CC   embryonic stem cells, besides, haematopoietic lineage; modulates
CC   mammalian characteristics, such as, body height, weight, hair colour, eye
CC   colour, skin, percentage of adipose tissue, pigmentation, size, and shape
CC   (e.g., cosmetic surgery); modulates mammalian metabolism; changes
CC   mammal's metal state or physical state by influencing biorhythms,
CC   caricadic rhythms, depression, tendency for violence, tolerance for pain,
CC   reproductive capabilities, hormonal or endocrine levels, appetite,
CC   libido, memory, or stress; increases or decreases storage capabilities,
CC   fat content, lipid, protein, carbohydrate, vitamins, minerals, cofactors
CC   or other nutritional components. This sequence encodes a novel human
CC   musculoskeletal system antigen.
CC   Note: The sequence data for this patent did not form part of the
CC   printed specification, but was obtained in electronic format directly
CC   from the US patent office at
CC   ftp.seqdata.uspto.gov/sequence.html?DocID=20020147140.

PT Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
PT useful for preventing, diagnosing and/or treating cancers and
PT metastasis -
XX

```
PS   Claim 1; SEQ ID NO 44; 3071pp + Sequence Listing; English.
XX
CC   AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC   amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC   activity, and can be used in gene therapy and vaccine production. (I)
CC   proteins and polynucleotides may be used in the prevention, diagnosis and
CC   treatment of diseases associated with inappropriate (I) expression. For
CC   example, they may be used to treat disorders associated with decreased
CC   expression by rectifying mutations or deletions in a patient's genome
CC   that affect the activity of (I) by expressing inactive proteins or to
CC   supplement the patients own production of (I). Additionally, (I)
CC   polynucleotides may be used to produce the secreted (I), by inserting
CC   the nucleic acids into a host cell and culturing the cell to express the
CC   protein. (I) proteins and polynucleotides may be used to prevent,
CC   diagnose and treat immune/haematopoietic-related diseases, especially
CC   cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC   to AAK87694 represent human immune/haematopoietic antigen genomic
CC   sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC   represent sequences used in the exemplification of the present invention.

XX
PT   Novel murine polynucleotides that individually identify novel genes
PT   into which a retroviral gene trap vector has been integrated, useful in
PT   genomic analysis and in discovery, development of therapeutic and
PT   diagnostic agents -
XX
PS   Claim 2; SEQ ID NO 978; 29pp + Sequence Listing; English.
XX
CC   The invention relates to isolated murine polynucleotides (I) comprising a
CC   contiguous stretch of at least about 60 nucleotides of a sequence
CC   (ABQ96733-ABQ98191) chosen from 1461 OMNIBANK gene trapped sequences
CC   (GTSs). The novel genes can be used in a process to identify novel
CC   polynucleotide sequences by comparing them to the novel gene sequences.
CC   The novel genes and cells are useful in functional genomic analysis and
CC   in the discovery and development of new therapeutic and diagnostic agents
CC   and methods. (I) is useful for identifying the coding regions of the
CC   murine genome, to isolate cDNAs, genomic clones or full-length
CC   genes/polynucleotides or homologues, heterologues, paralogues or
CC   orthologues that are capable of hybridising to one or more of the GTSs
CC   under stringent conditions. (I) can be incorporated into a phage display
CC   system that can be used to screen for proteins or other ligands, that are
CC   capable of binding an amino acid sequence encoded by an oligonucleotide
CC   or polynucleotide sequence in at least one of the GTS sequences. (I) is
CC   useful in arrays, such as gene chips, to identify and characterise
CC   temporal and tissue specific gene expression, to identify the gene of
CC   interest from many sources and for genetic manipulations such as
CC   antisense inhibition and gene targeting. Decreasing the level of
CC   expression of (I) and/or down regulating the activity of peptides or
CC   proteins encoded by (I) is useful for treating development and cell
CC   differentiation disorders.
CC   Note: The sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from USPTO
CC   at sequdata.uspto.gov/sequence.html?DocID=20020081668.

XX
PT   Isolated polypeptide for treating, preventing and/ or prognosing
PT   disorders related to the colon including colon cancers and also for
PT   testing and detection e.g. diagnosis -
XX
PS   Disclosure; SEQ ID No 812; 562pp; English.
XX
CC   The present invention relates to the isolation of novel human colon
CC   associated polypeptides (AAU22468-AAU22701), and the cDNA and genomic
CC   sequences encoding for them. The sequences of the invention are useful
CC   in the diagnosis, treatment, prevention and/or prognosis of disorders
CC   of the colon including colon cancer, congenital abnormalities
CC   (e.g. atresia and stenosis), bacterial and viral infections,
CC   inflammatory bowel disease (IBD), neoplastic cell disorders
CC   (e.g. polyps and adenomas, intestinal inflammatory disorders, colitis,
CC   colonic inflammation, diarrhoea and dysentery, malabsorption syndromes
CC   (e.g. lactose intolerance), intestinal obstruction and sigmoid diseases.
CC   The polynucleotides sequences of the invention can also be used in gene
CC   therapy. AAS39582-AAS40060 represent DNA sequences encoding for the
CC   novel human colon associated polypeptides of the invention.
CC   Note: The sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences.

XX
DR WPI; 2001-465570/50.
XX
PT Isolated nucleic acid molecule encoding a reproductive system antigen
PT is used in preventing, treating or ameliorating a medical condition -
XX
PS Disclosure; SEQ ID NO 9103; 1297pp + Sequence Listing; English.
XX
CC The present invention provides the protein and coding sequences of a
CC number of human reproductive system related antigens. These can be used
CC in the prevention and treatment of reproductive system disorders,
CC including cancer. The present sequence is a genomic sequence encoding a
CC protein of the invention.

PT   Isolated nucleic acid molecule encoding a reproductive system antigen
PT   is used in preventing, treating or ameliorating a medical condition -
XX
PS   Disclosure; SEQ ID NO 9104; 1297pp + Sequence Listing; English.
XX
CC   The present invention provides the protein and coding sequences of a
CC   number of human reproductive system related antigens. These can be used
CC   in the prevention and treatment of reproductive system disorders,
CC   including cancer. The present sequence is a genomic sequence encoding a
CC   protein of the invention.

PT   Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
PT   useful for preventing, diagnosing and/or treating cancers and
PT   metastasis -
XX
PS   Disclosure; SEQ ID NO 27916; 3071pp + Sequence Listing; English.
XX
CC   AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC   amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC   activity, and can be used in gene therapy and vaccine production. (I)
CC   proteins and polynucleotides may be used in the prevention, diagnosis and
CC   treatment of diseases associated with inappropriate (I) expression. For
CC   example, they may be used to treat disorders associated with decreased
CC   expression by rectifying mutations or deletions in a patient's genome
CC   that affect the activity of (I) by expressing inactive proteins or to
CC   supplement the patients own production of (I). Additionally, (I)
CC   polynucleotides may be used to produce the secreted (I), by inserting
CC   the nucleic acids into a host cell and culturing the cell to express the
CC   protein. (I) proteins and polynucleotides may be used to prevent,
CC   diagnose and treat immune/haematopoietic-related diseases, especially
CC   cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC   to AAK87694 represent human immune/haematopoietic antigen genomic
CC   sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC   represent sequences used in the exemplification of the present invention.

PS Disclosure; SEQ ID NO 27932; 3071pp + Sequence Listing; English.
XX

```
CC   AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC   amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC   activity, and can be used in gene therapy and vaccine production. (I)
CC   proteins and polynucleotides may be used in the prevention, diagnosis and
CC   treatment of diseases associated with inappropriate (I) expression. For
CC   example, they may be used to treat disorders associated with decreased
CC   expression by rectifying mutations or deletions in a patient's genome
CC   that affect the activity of (I) by expressing inactive proteins or to
CC   supplement the patients own production of (I). Additionally, (I)
CC   polynucleotides may be used to produce the secreted (I), by inserting
CC   the nucleic acids into a host cell and culturing the cell to express the
CC   protein. (I) proteins and polynucleotides may be used to prevent,
CC   diagnose and treat immune/haematopoietic-related diseases, especially
CC   cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC   to AAK87694 represent human immune/haematopoietic antigen genomic
CC   sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC   represent sequences used in the exemplification of the present invention.

PT   Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
PT   useful for preventing, diagnosing and/or treating cancers and
PT   metastasis -
XX
PS   Disclosure; SEQ ID NO 42254; 3071pp + Sequence Listing; English.
XX
CC   AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC   amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC   activity, and can be used in gene therapy and vaccine production. (I)
CC   proteins and polynucleotides may be used in the prevention, diagnosis and
CC   treatment of diseases associated with inappropriate (I) expression. For
CC   example, they may be used to treat disorders associated with decreased
CC   expression by rectifying mutations or deletions in a patient's genome
CC   that affect the activity of (I) by expressing inactive proteins or to
CC   supplement the patients own production of (I). Additionally, (I)
CC   polynucleotides may be used to produce the secreted (I), by inserting
CC   the nucleic acids into a host cell and culturing the cell to express the
CC   protein. (I) proteins and polynucleotides may be used to prevent,
CC   diagnose and treat immune/haematopoietic-related diseases, especially
CC   cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC   to AAK87694 represent human immune/haematopoietic antigen genomic
CC   sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC   represent sequences used in the exemplification of the present invention.

XX
PT   Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
PT   useful for preventing, diagnosing and/or treating cancers and
PT   metastasis -
XX
PS   Disclosure; SEQ ID NO 42385; 3071pp + Sequence Listing; English.
XX
CC   AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC   amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC   activity, and can be used in gene therapy and vaccine production. (I)
CC   proteins and polynucleotides may be used in the prevention, diagnosis and
CC   treatment of diseases associated with inappropriate (I) expression. For
CC   example, they may be used to treat disorders associated with decreased
CC   expression by rectifying mutations or deletions in a patient's genome
CC   that affect the activity of (I) by expressing inactive proteins or to
CC   supplement the patients own production of (I). Additionally, (I)
CC   polynucleotides may be used to produce the secreted (I), by inserting
CC   the nucleic acids into a host cell and culturing the cell to express the
CC   protein. (I) proteins and polynucleotides may be used to prevent,
CC   diagnose and treat immune/haematopoietic-related diseases, especially
CC   cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC   to AAK87694 represent human immune/haematopoietic antigen genomic
CC   sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC   represent sequences used in the exemplification of the present invention.

PT Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
PT useful for preventing, diagnosing and/or treating cancers and
PT metastasis -
XX
PS Disclosure; SEQ ID NO 42404; 3071pp + Sequence Listing; English.
XX
CC AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC activity, and can be used in gene therapy and vaccine production. (I)
CC proteins and polynucleotides may be used in the prevention, diagnosis and
CC treatment of diseases associated with inappropriate (I) expression. For
CC example, they may be used to treat disorders associated with decreased
CC expression by rectifying mutations or deletions in a patient's genome
CC that affect the activity of (I) by expressing inactive proteins or to
CC supplement the patients own production of (I). Additionally, (I)
CC polynucleotides may be used to produce the secreted (I), by inserting
CC the nucleic acids into a host cell and culturing the cell to express the
CC protein. (I) proteins and polynucleotides may be used to prevent,
CC diagnose and treat immune/haematopoietic-related diseases, especially
CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC to AAK87694 represent human immune/haematopoietic antigen genomic
CC sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC represent sequences used in the exemplification of the present invention.

PT   Polynucleotides encoding digestive system antigens, useful for
PT   diagnosing, treating, preventing and/or prognozing disorders of the
PT   digestive system, particularly cancer and cancer metastases -
XX
PS   Disclosure; SEQ ID NO 3935; 986pp; English.
XX
CC   The present invention provides the protein and coding sequences of a
CC   number of human digestive system antigens. These can be used in the
CC   diagnosis, treatment and prevention of digestive system disorders,
CC   including cancer, Meckel's diverticulum, bacterial or parasitic
CC   infections, appendicitis, Hirschsprung's disease, chronic colitis or
CC   ulcerative colitis. The present sequence is a genomic DNA fragment
CC   encoding a digestive system antigen of the invention.

PT Polynucleotides encoding digestive system antigens, useful for
PT diagnosing, treating, preventing and/or prognozing disorders of the
PT digestive system, particularly cancer and cancer metastases -
XX
PS Disclosure; SEQ ID NO 3936; 986pp; English.
XX
CC The present invention provides the protein and coding sequences of a
CC number of human digestive system antigens. These can be used in the
CC diagnosis, treatment and prevention of digestive system disorders,
CC including cancer, Meckel's diverticulum, bacterial or parasitic
CC infections, appendicitis, Hirschsprung's disease, chronic colitis or
CC ulcerative colitis. The present sequence is a genomic DNA fragment
CC encoding a digestive system antigen of the invention.

XX
PT Detecting granulocyte activation by detecting differential expression
PT of genes associated with granulocyte activation, which serves as
PT diagnostic markers that is useful for monitoring disease states and
PT drug toxicity -
XX
PS Claim 1; SEQ ID No 141; 114pp; English.
XX
CC The invention relates to detecting (M1) granulocyte (GC) activation
CC (GCA), by detecting the level of expression of gene(s) (Gs) identified by
CC DNA chip analysis as given in the specification, and comparing
CC the expression level to an expression level in an unactivated
CC GC, where differential expression of Gs is indicative of GCA.
CC Also included are modulating (M2) GA by contacting GC with an agent
CC that alters the expression of at least one gene in Gs; (2) screening (M3)
CC for an agent capable of modulating GCA or an inflammation (especially
CC chronic) in a tissue, an allergic response in a subject, exposure of a
CC subject to a pathogen or sterile inflammatory disease using the
CC gene expression profile; (3) detecting (M4) an inflammation (especially

```
CC   chronic) in a tissue, an allergic response in a subject, exposure of a
CC   subject to a pathogen or sterile inflammatory disease, by detecting the
CC   level of expression in a sample of the tissue of gene(s) from Gs, where
CC   the level of expression of the gene is indicative of inflammation;
CC   (4) treating (M5) an inflammation (especially chronic) or in a tissue,
CC   an allergic response in a subject, exposure of a subject to a pathogen
CC   or sterile inflammatory disease, by contacting a tissue having
CC   inflammation with an agent that modulates the expression of gene(s)
CC   from Gs in the tissue. M1 is useful for detecting GCA; M2 is useful for
CC   modulating GA; M3 is useful for screening an agent capable of modulating
CC   GCA preferably in an inflammation in a tissue; M4 is useful for
CC   detecting an inflammation (especially chronic) in a tissue, an allergic
CC   response in a subject, exposure of a subject to a pathogen or sterile
CC   inflammatory disease (e.g. psoriasis, rheumatoid arthritis,
CC   glomerulonephritis, asthma, thrombosis, cardiac reperfusion injury, renal
CC   reperfusion injury, ARDS, adult respiratory distress syndrome,
CC   inflammatory bowel disease, Crohn's disease, ulcerative colitis,
CC   periodontal disease; also bacterial infection, viral infection,
CC   parasitic infection, protozoal infection, fungal infection and M5 is
CC   useful for treating one of the above conditions. The present
CC   sequence represents a gene differentially expressed in granulocytes.
CC   Note: The sequence data for this patent did not form part
CC   of the printed specification, but was obtained in electronic
CC   format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences.

PT Nucleic acids encoding 3224 human nervous system antigen polypeptides,
PT useful for preventing, diagnosing and/or treating nervous system
PT cancers and metastases -
XX
PS Disclosure; SEQ ID NO 9486; 1701pp + Sequence Listing; English.
XX
CC The invention relates to novel genes (ABA11004-ABA21534) and proteins
CC (ABB14678-ABB18001) useful for preventing, treating or ameliorating
CC medical conditions e.g. by protein or gene therapy. The genes are
CC isolated from a range of human tissues disclosed in the specification.
CC The nucleic acids, proteins, antibodies and (ant)agonists are useful
CC in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast
CC and ovarian cancer and other cancers of the adrenal gland, bone, bone
CC marrow, breast, gastrointestinal tract, liver, lung, or urogenital;
CC (b) immune disorders e.g. Addison's disease, allergies, autoimmune
CC haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's
CC disease, multiple sclerosis, rheumatoid arthritis and ulcerative
CC colitis; (c) cardiovascular disorders such as myocardial ischaemias;
CC (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and
CC epilepsy; and (f) infectious diseases such as viral, bacterial, fungal
CC and parasitic infections.
CC Note: The sequence data for this patent did not form part of the
CC printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pct_sequences.

XX
PS   Example 2; SEQ ID NO 3186; 781pp + Sequence Listing; English.
XX
CC   The invention relates to novel genes (AAL34669-AAL37666) and proteins
CC   (ABB03087-ABB04109) associated with the musculoskeletal system useful
CC   for preventing, treating or ameliorating medical conditions e.g. by
CC   protein or gene therapy. The genes are isolated from a range of human
CC   tissues disclosed in the specification. The nucleic acids, proteins,
CC   antibodies and (ant)agonists are useful in the diagnosis, treatment
CC   and prevention of: (a) cancer, e.g. breast and ovarian cancer and
CC   other cancers of the adrenal gland, bone, bone marrow, breast,
CC   gastrointestinal tract, liver, lung, or urogenital; (b) immune
CC   disorders e.g. Addison's disease, allergies, autoimmune haemolytic
CC   anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease,
CC   multiple sclerosis, rheumatoid arthritis and ulcerative colitis;
CC   (c) cardiovascular disorders such as myocardial ischaemias; (d) wound
CC   healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy;
CC   and (f) infectious diseases such as viral, bacterial, fungal and
CC   parasitic infections.
CC   Note: The sequence data for this patent did not form part of the
CC   printed specification, but was obtained in electronic format directly
CC   from WIPO at ftp.wipo.int/pub/published_pct_sequences.

PT   metastasis -
XX
PS   Disclosure; SEQ ID NO 19619; 3071pp + Sequence Listing; English.
XX
CC   AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC   amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC   activity, and can be used in gene therapy and vaccine production. (I)
CC   proteins and polynucleotides may be used in the prevention, diagnosis and
CC   treatment of diseases associated with inappropriate (I) expression. For
CC   example, they may be used to treat disorders associated with decreased
CC   expression by rectifying mutations or deletions in a patient's genome
CC   that affect the activity of (I) by expressing inactive proteins or to
CC   supplement the patients own production of (I). Additionally, (I)
CC   polynucleotides may be used to produce the secreted (I), by inserting
CC   the nucleic acids into a host cell and culturing the cell to express the
CC   protein. (I) proteins and polynucleotides may be used to prevent,
CC   diagnose and treat immune/haematopoietic-related diseases, especially
CC   cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC   to AAK87694 represent human immune/haematopoietic antigen genomic
CC   sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC   represent sequences used in the exemplification of the present invention.

PT Isolated nucleic acid molecules encoding musculoskeletal system
PT associated polypeptides, useful for detecting disorders, e.g. cancer -
XX
PS Disclosure; SEQ ID NO 3186; 321pp; English.
XX
CC The invention describes an isolated nucleic acid molecule comprising a
CC sequence encoding musculoskeletal system associated polypeptides useful
CC for detecting disorders, e.g., cancer or cancer metastases, in animals
CC or humans. The nucleic acid: stimulates re-vascularisation of ischaemic
CC tissues associated with conditions such as thrombosis, arteriosclerosis,
CC and other cardiovascular conditions; treats wounds due to injuries,
CC burns, post-operative tissue repair, and ulcers; stimulates angiogenesis
CC and limb regeneration; stimulates neuronal growth; can treat and prevent
CC neuronal damage occurring in certain disorders or neurodegenerative
CC conditions, such as, Alzheimer's disease, Parkinson's disease, and
CC AIDS-related complex; stimulates chondrocyte growth, thus they can be
CC used to enhance bone and periodontal regeneration and aid in tissue
CC transports or bone grafts; prevents skin aging due to sunburn by
CC stimulating keratinocyte growth; prevents hair loss, since FGF family
CC members activate hair-forming cells and promotes melanocyte growth;
CC stimulates growth and differentiation of hematopoietic cells and bone
CC marrow cells when used in combination with other cytokines; maintains
CC organs before transplantation or for supporting cell culture of primary
CC tissues; induces tissue of mesodermal origin to differentiate in early
CC embryos; increases or decreases the differentiation or proliferation of
CC embryonic stem cells, besides, haematopoietic lineage; modulates
CC mammalian characteristics, such as, body height, weight, hair colour, eye
CC colour, skin, percentage of adipose tissue, pigmentation, size, and shape
CC (e.g., cosmetic surgery); modulates mammalian metabolism; changes
CC mammal's metal state or physical state by influencing biorhythms,
CC caricadic rhythms, depression, tendency for violence, tolerance for pain,
CC reproductive capabilities, hormonal or endocrine levels, appetite,
CC libido, memory, or stress; increases or decreases storage capabilities,
CC fat content, lipid, protein, carbohydrate, vitamins, minerals, cofactors
CC or other nutritional components. This sequence encodes a novel human
CC musculoskeletal system antigen.
CC Note: The sequence data for this patent did not form part of the
CC printed specification, but was obtained in electronic format directly
CC from the US patent office at
CC ftp.seqdata.uspto.gov/sequence.html?DocID=20020147140.

PT   Human and murine cerebus-like proteins - used for treating tissue
PT   defects and degenerative nerve conditions
XX
PS   Disclosure; Page 39-41; 50pp; English.
XX
CC   Compositions containing cerberus like proteins can be used for
CC   inducing the formation of neurons and related neural cells and
CC   tissues, such as Schwann cells, glial cells, and astrocytes, as
CC   well as liver, pancreas, lung, heart, kidney, spleen, stomach, and
CC   cardiac tissue and cells. They may also be used to treat precursor
CC   or stem cells. The compositions can also be used for treating
CC   tissue defects, and healing and maintenance of various types of
CC   tissues and wounds. The cerberus protein containing compositions may
CC   also be used to treat or prevent degenerate nerve conditions such
CC   as Parkinson's disease, Alzheimer's disease, and Lou Gehrig's
CC   disease. They can also be used to treat osteoporosis, rheumatoid
CC   arthritis, osteoarthritis, and other abnormalities of connective
CC   tissue, or of other organs or tissues.

PT   New DNA sequence encoding cerberus protein, useful for treating
PT   conditions involving degradation of, or damage to tissues -
XX
PS   Disclosure; Page 15-17; 21pp; English.
```

```
XX
CC   The invention relates to nucleic acid encoding a murine or human
CC   cerberus-like protein. The protein is useful for the formation of neurons
CC   and related neural cells e.g. Schwann cells and glial cells. The protein
CC   is also useful for the formation of other tissues e.g. liver and cardiac
CC   tissue, for causing stem cells e.g. endoderm cells to differentiate, for
CC   regulation of embryonic cell development. The protein is also useful for
CC   treating wounds by repairing tissue or inducing the formation of new
CC   cells, for treating degenerative nerve conditions e.g. Parkinson's
CC   disease, Alzheimer's disease and Lou Gehrig's disease, for treating
CC   connective tissue abnormalities e.g. osteoporosis, rheumatoid arthritis,
CC   osteoarthritis and for treating tumours. The present sequence represents
CC   the human cerberus-like protein gene.

PT   Novel mutant equine herpesvirus type-1 isolates having mutation in
PT   immediate early gene, useful in formulating vaccine compositions for
PT   preventing and treating equine herpesvirus type-1 infections in horses
PT   -
XX
PS   Disclosure; Page 47-51; 68pp; English.
XX
CC   The present invention relates to a mutant equine herpesvirus type-1
CC   (EHV-1) isolate, in particular a replication-competent EHV-1 isolate
CC   comprising a mutation in the immediate-early (IE) gene of the viral
CC   genome. The mutant isolate is useful for stimulating an immune response,
CC   preferably a cell-mediated or humoral immune response, against EHV-1,
CC   and for preventing or inhibiting an EHV-1 infection in a horse. The
CC   present sequence is the EHV-1 immediate early gene.

PT   New isolated non-typeable Haemophilus influenzae BASB204 polypeptides
PT   useful as components of vaccines useful for treating bacterial
PT   infection such as otitis media, delayed speech learning, and
PT   inflammation of the middle ear -
XX
PS   Example 2; Fig 3; 97pp; English.
XX
CC   The invention relates to an isolated polypeptide comprising an amino acid
CC   sequence which has 85% identity to the entire length of a fully defined
CC   non-typeable Haemophilus influenzae BASB204 polypeptide sequence, given
CC   in specification. The isolated protein, an immunogenic fragment of the
CC   protein or an antibody immunospecific for the protein or immunogenic
CC   fragment is useful for diagnosing a non-typeable H. influenzae infection.
CC   The molecules may be used in the prevention of adhesion of Gram-negative
CC   or Gram-positive bacteria to mammalian extracellular matrix proteins in
CC   wounds, to block bacterial adhesion between mammalian extracellular
CC   matrix and bacterial BASB204 protein that mediate tissue damage and/or to
CC   block the normal progression of pathogenesis in infections initiated
CC   other than by the implantation of in-dwelling devices. The isolated
CC   protein encoding polynucleotide is useful as a research reagent and
CC   material for discovery of treatments of and diagnostics for diseases,
CC   particularly human diseases. The antibody of the invention is useful for
CC   treating infections preferably bacterial infections such as otitis media
CC   in infants and children, pneumonia in elders, sinusitis, nosocomial
CC   infections, or invasive diseases, chronic otitis media with hearing loss,
CC   fluid accumulation in the middle ear, auditive nerve damage, delayed
CC   speech learning, infections of the upper respiratory tract and
CC   inflammation of the middle ear. This polynucleotide sequence represents a
CC   Haemophilus influenzae BASB204 related nucleic acid of the invention.

PT New isolated non-typeable Haemophilus influenzae BASB204 polypeptides
PT useful as components of vaccines useful for treating bacterial
PT infection such as otitis media, delayed speech learning, and
PT inflammation of the middle ear -
XX
PS Example 2; Fig 3; 97pp; English.
XX
CC The invention relates to an isolated polypeptide comprising an amino acid
CC sequence which has 85% identity to the entire length of a fully defined
CC non-typeable Haemophilus influenzae BASB204 polypeptide sequence, given
CC in specification. The isolated protein, an immunogenic fragment of the
CC protein or an antibody immunospecific for the protein or immunogenic
CC fragment is useful for diagnosing a non-typeable H. influenzae infection.
CC The molecules may be used in the prevention of adhesion of Gram-negative
CC or Gram-positive bacteria to mammalian extracellular matrix proteins in
CC wounds, to block bacterial adhesion between mammalian extracellular
CC matrix and bacterial BASB204 protein that mediate tissue damage and/or to
CC block the normal progression of pathogenesis in infections initiated
CC other than by the implantation of in-dwelling devices. The isolated
CC protein encoding polynucleotide is useful as a research reagent and
CC material for discovery of treatments of and diagnostics for diseases,
CC particularly human diseases. The antibody of the invention is useful for
CC treating infections preferably bacterial infections such as otitis media
CC in infants and children, pneumonia in elders, sinusitis, nosocomial
CC infections, or invasive diseases, chronic otitis media with hearing loss,
CC fluid accumulation in the middle ear, auditive nerve damage, delayed
CC speech learning, infections of the upper respiratory tract and
CC inflammation of the middle ear. This polynucleotide sequence represents a
CC Haemophilus influenzae BASB204 related nucleic acid of the invention.

XX
CC   The present invention provides a number of human immune system associated
CC   genes which are modified by the methylation of cytosines. The sequences
CC   can be used in the diagnosis and treatment of immune system disorders,
CC   including eye diseases such as retinopathy, neovascular glaucoma and
CC   macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid
CC   leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis,
CC   rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel
CC   diseases. The present sequence is a gene of the invention.

            Clones are derived from the mouse BAC library RPCI-23. For BAC
            library availability, please contact Pieter de Jong
            (pieter@dejong.med.buffalo.edu). Clones may be purchased from
            BACPAC Resources (http://bacpac.med.buffalo.edu/orderingframe.htm)
            or from Resea ch Genetics (info@resgen.com). BAC end page:

                     /clone_lib="Mouse 10kb plasmid UUGC1M library"
                     /note="Vector: PWD42nv; Purified genomic DNA from M.
                     musculus C57BL/6J (male) was obtained  from the Jackson
                     Laboratory Mouse DNA Resource
                     (http://www.jax.org/resources/documents/dnares/). The DNA
                     was hydrodynamically sheared by repeated passage through a
                     0.005 inch orifice at constant velocity. The sheared DNA
                     was blunt end-repaired with T4 DNA polymerase and T4
                     polynucleotide kinase. Adaptor oligonucleotides were
                     ligated to the blunt ends in high  molar excess. The
                     adaptored DNA was purified and size-selected for a 9.5 to
                     10.5 kb range using preparative agarose gel
                     electrophoresis. Vector DNA was prepared from a derivative
                     of pWD42 (gi|4732114|gb|AF129072.1), a copy-number
                     inducible derivative of plasmid R1. The vector was ligated
                     with adaptors complementary to the insert adaptors and
                     purified. The sheared, adaptored mouse DNA was annealed to
                     adaptored vector DNA, and transformed into
                     chemically-competent E. coli XL10-Gold (Stratagene) cells
                     and selected for ampicillin resistance."

                     musculus C57BL/6J (male) was obtained  from the Jackson
                     Laboratory Mouse DNA Resource
                     (http://www.jax.org/resources/documents/dnares/). The DNA
                     was hydrodynamically sheared by repeated passage through a
                     0.005 inch orifice at constant velocity. The sheared DNA
                     was blunt end-repaired with T4 DNA polymerase and T4
                     polynucleotide kinase. Adaptor oligonucleotides were
                     ligated to the blunt ends in high  molar excess. The
                     adaptored DNA was purified and size-selected for a 9.5 to
                     10.5 kb range using preparative agarose gel
                     electrophoresis. Vector DNA was prepared from a derivative
                     of pWD42 (gi|4732114|gb|AF129072.1), a copy-number
                     inducible derivative of plasmid R1. The vector was ligated
                     with adaptors complementary to the insert adaptors and
                     purified. The sheared, adaptored mouse DNA was annealed to
                     adaptored vector DNA, and transformed into
                     chemically-competent E. coli XL10-Gold (Stratagene) cells
                     and selected for ampicillin resistance."

                     /clone_lib="Mouse 10kb plasmid UUGC1M library"
                     /note="Vector: PWD42nv; Purified genomic DNA from M.
                     musculus C57BL/6J (male) was obtained  from the Jackson
                     Laboratory Mouse DNA Resource
                     (http://www.jax.org/resources/documents/dnares/). The DNA
                     was hydrodynamically sheared by repeated passage through a
                     0.005 inch orifice at constant velocity. The sheared DNA
                     was blunt end-repaired with T4 DNA polymerase and T4
                     polynucleotide kinase. Adaptor oligonucleotides were
                     ligated to the blunt ends in high  molar excess. The
                     adaptored DNA was purified and size-selected for a 9.5 to
                     10.5 kb range using preparative agarose gel
                     electrophoresis. Vector DNA was prepared from a derivative
                     of pWD42 (gi|4732114|gb|AF129072.1), a copy-number
                     inducible derivative of plasmid R1. The vector was ligated
                     with adaptors complementary to the insert adaptors and
                     purified. The sheared, adaptored mouse DNA was annealed to
                     adaptored vector DNA, and transformed into
                     chemically-competent E. coli XL10-Gold (Stratagene) cells
                     and selected for ampicillin resistance."

                     /note="Vector: PWD42nv; Purified genomic DNA from M.
                     musculus C57BL/6J (male) was obtained  from the Jackson
                     Laboratory Mouse DNA Resource
                     (http://www.jax.org/resources/documents/dnares/). The DNA
                     was hydrodynamically sheared by repeated passage through a
                     0.005 inch orifice at constant velocity. The sheared DNA
                     was blunt end-repaired with T4 DNA polymerase and T4
                     polynucleotide kinase. Adaptor oligonucleotides were
                     ligated to the blunt ends in high  molar excess. The
                     adaptored DNA was purified and size-selected for a 9.5 to
                     10.5 kb range using preparative agarose gel
                     electrophoresis. Vector DNA was prepared from a derivative
                     of pWD42 (gi|4732114|gb|AF129072.1), a copy-number
                     inducible derivative of plasmid R1. The vector was ligated
                     with adaptors complementary to the insert adaptors and
                     purified. The sheared, adaptored mouse DNA was annealed to
                     adaptored vector DNA, and transformed into
                     chemically-competent E. coli XL10-Gold (Stratagene) cells
                     and selected for ampicillin resistance."

                     /clone_lib="Mouse 10kb plasmid UUGC1M library"
                     /note="Vector: PWD42nv; Purified genomic DNA from M.
                     musculus C57BL/6J (male) was obtained  from the Jackson
                     Laboratory Mouse DNA Resource
                     (http://www.jax.org/resources/documents/dnares/). The DNA
                     was hydrodynamically sheared by repeated passage through a
                     0.005 inch orifice at constant velocity. The sheared DNA
                     was blunt end-repaired with T4 DNA polymerase and T4
                     polynucleotide kinase. Adaptor oligonucleotides were
                     ligated to the blunt ends in high  molar excess. The
                     adaptored DNA was purified and size-selected for a 9.5 to
                     10.5 kb range using preparative agarose gel
                     electrophoresis. Vector DNA was prepared from a derivative
                     of pWD42 (gi|4732114|gb|AF129072.1), a copy-number
                     inducible derivative of plasmid R1. The vector was ligated
                     with adaptors complementary to the insert adaptors and
                     purified. The sheared, adaptored mouse DNA was annealed to
                     adaptored vector DNA, and transformed into
                     chemically-competent E. coli XL10-Gold (Stratagene) cells
                     and selected for ampicillin resistance."

                     /strain="C57BL/6"
                     /db_xref="taxon:10090"
                     /clone="IMAGE:5687116"
                     /tissue_type="whole brain"
                     /dev_stage="embryo 18.5 dpc"
                     /lab_host="DH10B (T1 phage resistant)"
                     /clone_lib="NIH_BMAP_EH0p"
                     /note="Organ: brain; Vector: pYX-Asc; Site_1: EcoR I;
                     Site_2: Not I; The library was constructed according to
                     Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
                     1996. Denatured mRNa was size fractionated on a 1% agarose
                     gel. First strand cDNA synthesis was primed with an
                     oligo-dT primer containing a Not I site. Double stranded
                     cDNA was size selected according to mRNA size fraction,
                     ligated with EcoR I adaptor, digested with Not I, and then
                     cloned directionally into pYX-Asc vector. The library tag
                     sequence located between the Not I site and the polyA tail
                     , is CAGCCACGAC. This library was created for the
                     University of Iowa Mouse Brain Molecular Anatomy Project
                     (BMAP): 'Gene Discovery in the Developing Mouse Nervous
                     System', supported by National Institute of Mental Health
                     (NIMH), Hemin Chin, Ph.D., program coordinator."

                     /clone_lib="Mouse 10kb plasmid UUGC1M library"
                     /note="Vector: PWD42nv; Purified genomic DNA from M.
                     musculus C57BL/6J (male) was obtained  from the Jackson
                     Laboratory Mouse DNA Resource
                     (http://www.jax.org/resources/documents/dnares/). The DNA
                     was hydrodynamically sheared by repeated passage through a
                     0.005 inch orifice at constant velocity. The sheared DNA
                     was blunt end-repaired with T4 DNA polymerase and T4
                     polynucleotide kinase. Adaptor oligonucleotides were
                     ligated to the blunt ends in high  molar excess. The
                     adaptored DNA was purified and size-selected for a 9.5 to
                     10.5 kb range using preparative agarose gel
                     electrophoresis. Vector DNA was prepared from a derivative
                     of pWD42 (gi|4732114|gb|AF129072.1), a copy-number
                     inducible derivative of plasmid R1. The vector was ligated
                     with adaptors complementary to the insert adaptors and
                     purified. The sheared, adaptored mouse DNA was annealed to
                     adaptored vector DNA, and transformed into
                     chemically-competent E. coli XL10-Gold (Stratagene) cells
```

```
                    and selected for ampicillin resistance."

                     /clone_lib="Mouse 10kb plasmid UUGC1M library"
                     /note="Vector: PWD42nv; Purified genomic DNA from M.
                     musculus C57BL/6J (male) was obtained  from the Jackson
                     Laboratory Mouse DNA Resource
                     (http://www.jax.org/resources/documents/dnares/). The DNA
                     was hydrodynamically sheared by repeated passage through a
                     0.005 inch orifice at constant velocity. The sheared DNA
                     was blunt end-repaired with T4 DNA polymerase and T4
                     polynucleotide kinase. Adaptor oligonucleotides were
                     ligated to the blunt ends in high  molar excess. The
                     adaptored DNA was purified and size-selected for a 9.5 to
                     10.5 kb range using preparative agarose gel
                     electrophoresis. Vector DNA was prepared from a derivative
                     of pWD42 (gi|4732114|gb|AF129072.1), a copy-number
                     inducible derivative of plasmid R1. The vector was ligated
                     with adaptors complementary to the insert adaptors and
                     purified. The sheared, adaptored mouse DNA was annealed to
                     adaptored vector DNA, and transformed into
                     chemically-competent E. coli XL10-Gold (Stratagene) cells
                     and selected for ampicillin resistance."

  TITLE     Direct Submission
  JOURNAL   Submitted (16-APR-2002) Yoshihide Hayashizaki, The Institute of
            Physical and Chemical Research (RIKEN), Laboratory for Genome
            Exploration Research Group, RIKEN Genomic Sciences Center (GSC),
            RIKEN Yokohama Institute; 1-7-22 Suehiro-cho, Tsurumi-ku, Yokohama,
            Kanagawa 230-0045, Japan (E-mail:genome-res@gsc.riken.go.jp,
            URL:http://genome.gsc.riken.go.jp/, Tel:81-45-503-9222,
            Fax:81-45-503-9216)
COMMENT     cDNA library was prepared and sequenced in Mouse Genome
            Encyclopedia Project of Genome Exploration Research Group in Riken
            Genomic Sciences Center and Genome Science Laboratory in RIKEN.
            Division of Experimental Animal Research in Riken contributed to
            prepare mouse tissues.
            Tissues were provided by Dr. John Todd (Dept. of Medical Genetics
            Wellcome Trust Centre for Molecular Mechanisms in Disease Wellcome
            Trust/MRC building Addenbrookes Hospital Cambridge) whose
            assistance we gratefully acknowledge.
            Please visit our web site for further details.

            Fax:81-45-503-9216)
COMMENT     cDNA library was prepared and sequenced in Mouse Genome
            Encyclopedia Project of Genome Exploration Research Group in Riken
            Genomic Sciences Center and Genome Science Laboratory in RIKEN.
            Division of Experimental Animal Research in Riken contributed to
            prepare mouse tissues.
            Tissues were provided by Dr. Tomohiro Kono (Department of Animal
            Science, Tokyo University of Agriculture, 1737 Hunako Atsugi City,
            Kanagawa Prefecture, Japan) whose assistance we gratefully
            acknowledge.
            Please visit our web site for further details.

                     /note="Vector: pBluescript SK-; Site_1: EcoRI; Site_2:
                     XhoI; Sporozoites were obtained from in vitro sporulated
                     and excysted oocysts of E.tenella grown in chickens. cDNA
                     was synthesized from poly mRNA using an oligo-dT primer
                     containing a XhoI site. Following second strand synthesis,
                     EcoRI adapters were ligated to the cDNA and products were
                     size-selected on sephacryl S500. The cDNA were ligated to
                     EcoRI/XhoI prepared lambda ZapII (Stratagene). The primary
                     library was mass excised using ExAssist helper phage
                     (Stratagene). The phagemids were preciptated with PEG 8000
                     , extracted with phenol/chloroform and electroporated into
                     DH10B cells. The library may contain a small percentage of
                     host or bacterial contaminants. Library materials provided

                     /clone_lib="Mouse 10kb plasmid UUGC1M library"
                     /note="Vector: PWD42nv; Purified genomic DNA from M.
                     musculus C57BL/6J (male) was obtained  from the Jackson
                     Laboratory Mouse DNA Resource
                     (http://www.jax.org/resources/documents/dnares/). The DNA
                     was hydrodynamically sheared by repeated passage through a
                     0.005 inch orifice at constant velocity. The sheared DNA
                     was blunt end-repaired with T4 DNA polymerase and T4
                     polynucleotide kinase. Adaptor oligonucleotides were
                     ligated to the blunt ends in high  molar excess. The
                     adaptored DNA was purified and size-selected for a 9.5 to
                     10.5 kb range using preparative agarose gel
                     electrophoresis. Vector DNA was prepared from a derivative
                     of pWD42 (gi|4732114|gb|AF129072.1), a copy-number
                     inducible derivative of plasmid R1. The vector was ligated
                     with adaptors complementary to the insert adaptors and
                     purified. The sheared, adaptored mouse DNA was annealed to
                     adaptored vector DNA, and transformed into
                     chemically-competent E. coli XL10-Gold (Stratagene) cells
                     and selected for ampicillin resistance."

                     ; Sporozoites were obtained from in vitro sporulated and
                     excysted oocysts of E.tenella grown in chickens. cDNA was
                     synthesized from poly mRNA using an oligo-dT primer
                     containing a XhoI site. Following second strand synthesis,
                     EcoRI adapters were ligated to the cDNA and products were
                     size-selected on sephacryl S500. The cDNA were ligated to
                     EcoRI/XhoI prepared lambda ZapII (Stratagene). Clones were
                     converted to phagemids by mass excision using ExAssist
                     helper phage and E.coli SOLR cell (Stratagene). Clones
                     were selected by negative hybridization against a pool of
                     overrepresented ESTs (N>=10,from 1682 previous reads).
                     Insert sizes range from 1.2-2.9Kb. The library may contain
                     a small percentage of host or bacterial contaminents."

                     /note="Vector: PWD42nv; Purified genomic DNA from M.
                     musculus C57BL/6J (male) was obtained  from the Jackson
                     Laboratory Mouse DNA Resource
                     (http://www.jax.org/resources/documents/dnares/). The DNA
                     was hydrodynamically sheared by repeated passage through a
                     0.005 inch orifice at constant velocity. The sheared DNA
                     was blunt end-repaired with T4 DNA polymerase and T4
                     polynucleotide kinase. Adaptor oligonucleotides were
                     ligated to the blunt ends in high  molar excess. The
                     adaptored DNA was purified and size-selected for a 9.5 to
```

10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gi|4732114|gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

/note="Vector: pBluescript SK-; Site_1: EcoRI; Site_2: XhoI; Sporozoites were obtained from in vitro sporulated and excysted oocysts of E.tenella grown in chickens. cDNA was synthesized from poly mRNA using an oligo-dT primer containing a XhoI site. Following second strand synthesis, EcoRI adapters were ligated to the cDNA and products were size-selected on sephacryl S500. The cDNA were ligated to EcoRI/XhoI prepared lambda ZapII (Stratagene). The primary library was mass excised using ExAssist helper phage (Stratagene). The phagemids were preciptated with PEG 8000, extracted with phenol/chloroform and electroporated into DH10B cells. The library may contain a small percentage of host or bacterial contaminants. Library materials provided by: Paul Liberator, Merck Research Labs Library constructed by: Paul Liberator, Merck Research Labs."

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT New rhesus rhadino virus for producing non-human primate model useful
PT for testing potential treatments and efficacy of the candidate vaccine
PT for conditions associated with RRV infection -
XX
PS Claim 2; Page 83-122; 141pp; English.
XX
CC The present invention describes a novel rhesus macaque rhadinovirus
CC called macaca mulatta rhadinovirus 17577 (RRV). AAC64754 represents the
CC RRV genome sequence, and AAB53123 to AAB53204 represent the proteins
CC encoded by the genome sequence. The present invention also specifically
CC claims the individual open reading frame (ORF) nucleotide sequences from
CC the genome which encode the individual proteins, but these sequences are
CC not given. A non-human animal infected with RRV can be used for testing
CC the efficacy of drug in the treatment of condition associated with
CC infection with RRV such as Kaposi's sarcoma, lymphoproliferative
CC disorders, B-cell hyperplasia, lymphadenopathy, splenomegaly,
CC hypergammaglobinulinaemia or autoimmune haemolytic anaemia, by
CC administering the drug to a immuno-compromised non-human primate
CC preferably Rhesus macaque monkey obtained by as a result of infection
CC by Simian Immunodeficiency Virus (SIV). RRV is useful for producing
CC non-human primate model for testing potential treatments for conditions
CC associated with RRV infection. It is also useful for testing the
CC efficacy of the candidate vaccine against RRV infection or conditions
CC associated with its infection by administering the vaccine to the
CC subject capable of infection with RRV, inoculating the subject with RRV
CC and observing the effect of vaccine. AAC64755 to AAC64765 and AAB53205
CC to AAB53213 represent sequence used in the exemplification of the
CC present invention.

PT   Single exon nucleic acid probes for analyzing gene expression in human
PT   hearts -
XX
PS   Claim 4; SEQ ID No 19728; 530pp; English.
XX
CC   The present invention relates to single exon nucleic acid probes for
CC   measuring human gene expression in a sample derived from human heart. The
CC   present sequence is one such probe. The probes may be used for
CC   predicting, measuring and displaying gene expression in samples derived
CC   from the human heart via microarrays. By measuring gene expression, the
CC   probes are useful for predicting, diagnosing, grading, staging,
CC   monitoring and prognosing diseases of the human heart and vascular system
CC   e.g. cardiovascular disease, hypertension, cardiac arrhythmias and
CC   congenital heart disease.
CC   Note: The sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences.

PT   New rhesus rhadino virus for producing non-human primate model useful
PT   for testing potential treatments and efficacy of the candidate vaccine
PT   for conditions associated with RRV infection  -
XX
PS   Claim 2; Page 83-122; 141pp; English.
XX
CC   The present invention describes a novel rhesus macaque rhadinovirus
CC   called macaca mulatta rhadinovirus 17577 (RRV). AAC64754 represents the
CC   RRV genome sequence, and AAB53123 to AAB53204 represent the proteins
CC   encoded by the genome sequence. The present invention also specifically
CC   claims the individual open reading frame (ORF) nucleotide sequences from
CC   the genome which encode the individual proteins, but these sequences are
CC   not given. A non-human animal infected with RRV can be used for testing
CC   the efficacy of drug in the treatment of condition associated with
CC   infection with RRV such as Kaposi's sarcoma, lymphoproliferative
CC   disorders, B-cell hyperplasia, lymphadenopathy, splenomegaly,
CC   hypergammaglobinulinaemia or autoimmune haemolytic anaemia, by
CC   administering the drug to a immuno-compromised non-human primate
CC   preferably Rhesus macaque monkey obtained by as a result of infection
CC   by Simian Immunodeficiency Virus (SIV). RRV is useful for producing
CC   non-human primate model for testing potential treatments for conditions
CC   associated with RRV infection. It is also useful for testing the
CC   efficacy of the candidate vaccine against RRV infection or conditions
CC   associated with its infection by administering the vaccine to the
CC   subject capable of infection with RRV, inoculating the subject with RRV
CC   and observing the effect of vaccine. AAC64755 to AAC64765 and AAB53205
CC   to AAB53213 represent sequence used in the exemplification of the
CC   present invention.

PS   Disclosure; Column 67-96; 109pp; English.
XX
CC   This sequence is a fragment of the Kaposi's sarcoma-associated
CC   herpesvirus (KSHV) LUR (long unique region). This fragment contains
CC   coding regions for K1, ORF4 which encodes the complement binding protein
CC   v-CBP, ORF6 which encodes a ssDNA binding protein (SSBP), ORF7 which
CC   encodes a transport protein, ORF8 which encodes glycoprotein B, ORF9
CC   which encodes DNA polymerase (pol), ORF10, OFR11, K2 which encodes viral
CC   interleukin-6 (vIL-6), ORF02 which encodes dihydrofolate reductase
CC   (DHFR), K3 which encodes BHV4-IE1 I, ORF70 which encodes Thymidylate
CC   synthase, K4 which encodes vMIP-II, K5 which encodes BHV4-IE1 II, K6
CC   which encodes vMIP-I, K7, ORF16 which encodes Bcl-2, ORF17 which encodes
CC   capsid protein I, ORF18 and ORF19 which encodes Tegument protein I.
CC   KSHV is a new human Herpesvirus (HHV8) believed to cause Kaposi's sarcoma
CC   (KS) which is the most common form of neoplasm occurring in persons with
CC   acquired immune deficiency syndrome (AIDS). The DHFR protein is useful
CC   for vaccination, prophylaxis, diagnosis and treatment of a subject with
CC   Kaposi's sarcoma and for detecting expression of a DNA virus associated
CC   with Kaposi's sarcoma in a cell.

PT   New nucleic acid encoding Kaposi's sarcoma associated herpes virus
PT   proteins - useful for, e.g. detecting levels of HHV8 in, and
PT   preparation of vaccines for treatment of, HIV patients
XX
PS   Example 2; Page 135-203; 230pp; English.
XX
CC   This sequence represents the long unique region and terminal repeat of
CC   the Kaposi's sarcoma-associated herpes virus (KSHV). KSHV is also known
CC   as human herpes virus 8 (HHV8). This sequence contains the DNAs of the
CC   invention which encode KSHV polypeptides selected from: (a) viral
```

```
CC   macrophage inflammatory protein (MIP) II; (b) viral interleukin-6 (IL-6);
CC   (c) viral IRF 1; (d) complement-binding protein; glycoproteins B, M or L;
CC   (d) capsid protein IV encoded by ORF65; and (e) immediate early protein
CC   encoded by ORF73. Labelled probes for the nucleic acid, proteins encoded
CC   by it, and antibodies (Ab) specific for the proteins are useful for
CC   detecting HHV8, specifically for diagnosis of Kaposi's sarcoma, in body
CC   fluids or tissue samples. HHV8 infections can be treated with antisense
CC   or triplex forming molecules or agents that bind specifically to the
CC   protein. Ab may be used for prophylaxis or treatment of HHV8 infection,
CC   while the protein can be used in protective vaccines. Ab may also be used
CC   to differentiate between lymphomas, and HHV8 may be implicated in many
CC   other lymphoproliferative diseases such as lymphomas, leukaemia,
CC   splenomegaly and mycosis fungoides. Cells and animals containing the
CC   nucleic acid are useful for drug screening. HHV8-derived peptides can be
CC   used as targets for antiviral drugs, e.g. dihydrofolate reductase gene
CC   can be inhibited with methotrexate. These can also be used to determine
CC   the immune status of a patient infected with HIV. HHV8 derived protein
CC   viral MIP III may be used as an anti-inflammatory agent for,
CC   e.g. treating rheumatoid arthritis. This sequence is stated as containing
CC   81 open reading frames.

PT Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
PT useful for preventing, diagnosing and/or treating cancers and
PT metastasis -
XX
PS Disclosure; SEQ ID NO 34504; 3071pp + Sequence Listing; English.
XX
CC AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC activity, and can be used in gene therapy and vaccine production. (I)
CC proteins and polynucleotides may be used in the prevention, diagnosis and
CC treatment of diseases associated with inappropriate (I) expression. For
CC example, they may be used to treat disorders associated with decreased
CC expression by rectifying mutations or deletions in a patient's genome
CC that affect the activity of (I) by expressing inactive proteins or to
CC supplement the patients own production of (I). Additionally, (I)
CC polynucleotides may be used to produce the secreted (I), by inserting
CC the nucleic acids into a host cell and culturing the cell to express the
CC protein. (I) proteins and polynucleotides may be used to prevent,
CC diagnose and treat immune/haematopoietic-related diseases, especially
CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC to AAK87694 represent human immune/haematopoietic antigen genomic
CC sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC represent sequences used in the exemplification of the present invention.

XX
PT   Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
PT   useful for preventing, diagnosing and/or treating cancers and
PT   metastasis -
XX
PS   Disclosure; SEQ ID NO 34836; 3071pp + Sequence Listing; English.
XX
CC   AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC   amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC   activity, and can be used in gene therapy and vaccine production. (I)
CC   proteins and polynucleotides may be used in the prevention, diagnosis and
CC   treatment of diseases associated with inappropriate (I) expression. For
CC   example, they may be used to treat disorders associated with decreased
CC   expression by rectifying mutations or deletions in a patient's genome
CC   that affect the activity of (I) by expressing inactive proteins or to
CC   supplement the patients own production of (I). Additionally, (I)
CC   polynucleotides may be used to produce the secreted (I), by inserting
CC   the nucleic acids into a host cell and culturing the cell to express the
CC   protein. (I) proteins and polynucleotides may be used to prevent,
CC   diagnose and treat immune/haematopoietic-related diseases, especially
CC   cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC   to AAK87694 represent human immune/haematopoietic antigen genomic
CC   sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC   represent sequences used in the exemplification of the present invention.

PT Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
PT useful for preventing, diagnosing and/or treating cancers and
PT metastasis -
XX
PS Disclosure; SEQ ID NO 40733; 3071pp + Sequence Listing; English.
XX
CC AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC activity, and can be used in gene therapy and vaccine production. (I)
CC proteins and polynucleotides may be used in the prevention, diagnosis and
CC treatment of diseases associated with inappropriate (I) expression. For
CC example, they may be used to treat disorders associated with decreased
CC expression by rectifying mutations or deletions in a patient's genome
CC that affect the activity of (I) by expressing inactive proteins or to
CC supplement the patients own production of (I). Additionally, (I)
CC polynucleotides may be used to produce the secreted (I), by inserting
CC the nucleic acids into a host cell and culturing the cell to express the
CC protein. (I) proteins and polynucleotides may be used to prevent,
CC diagnose and treat immune/haematopoietic-related diseases, especially
CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC to AAK87694 represent human immune/haematopoietic antigen genomic
CC sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC represent sequences used in the exemplification of the present invention.

PT Determining the degree of cytosine methylation in genomic DNA, useful
PT for diagnosis and prognosis, comprises selective hybridization of
PT amplicons from chemically treated DNA -

```
XX
PS   Claim 12; 56pp + Sequence Listing; 56pp; German.
XX
CC   This invention describes a novel method for determining the degree of
CC   methylation of a particular cytosine in a motif 5'-CpG-3', present in a
CC   genomic sample of DNA. The sample is treated chemically to convert
CC   cytosine (C) but not methylated C, to uracil, then part of the genomic
CC   DNA that contains the target C is amplified to form a labeled amplicon.
CC   The amplicon is hybridised to two classes, each with at least one
CC   member, of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers
CC   and the degree of hybridisation to both classes is determined from the
CC   label on the amplicon. From the ratio of labels hybridised to the two
CC   classes of oligomers, the degree of methylation is calculated. The method
CC   is used: (i) for diagnosis and/or prognosis of side effects of
CC   therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders
CC   of the central nervous, cardiovascular, gastrointestinal and respiratory
CC   systems etc., particularly by detecting mutations or single nucleotide
CC   polymorphisms (SNP's); and (ii) for differentiation of cell or tissue
CC   types and for investigating cell differentiation. The method allows the
CC   methylation status of many C residues to be determined simultaneously.
CC   ABQ13410-ABQ54121 represent genomic DNA sequences used to illustrate the
CC   method for determining the degree of cytosine methylation described in
CC   the disclosure of the invention.

PT Determining the degree of cytosine methylation in genomic DNA, useful
PT for diagnosis and prognosis, comprises selective hybridization of
PT amplicons from chemically treated DNA -
XX
PS Claim 12; 56pp + Sequence Listing; 56pp; German.
XX
CC This invention describes a novel method for determining the degree of
CC methylation of a particular cytosine in a motif 5'-CpG-3', present in a
CC genomic sample of DNA. The sample is treated chemically to convert
CC cytosine (C) but not methylated C, to uracil, then part of the genomic
CC DNA that contains the target C is amplified to form a labeled amplicon.
CC The amplicon is hybridised to two classes, each with at least one
CC member, of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers
CC and the degree of hybridisation to both classes is determined from the
CC label on the amplicon. From the ratio of labels hybridised to the two
CC classes of oligomers, the degree of methylation is calculated. The method
CC is used: (i) for diagnosis and/or prognosis of side effects of
CC therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders
CC of the central nervous, cardiovascular, gastrointestinal and respiratory
CC systems etc., particularly by detecting mutations or single nucleotide
CC polymorphisms (SNP's); and (ii) for differentiation of cell or tissue
CC types and for investigating cell differentiation. The method allows the
CC methylation status of many C residues to be determined simultaneously.
CC ABQ13410-ABQ54121 represent genomic DNA sequences used to illustrate the
CC method for determining the degree of cytosine methylation described in
CC the disclosure of the invention.

XX
CC   The present invention relates to proteins from Neisseria gonorrhoeae.
CC   Also disclosed are the nucleic acid molecules encoding the proteins and
CC   antibodies that specifically bind to the proteins. The composition
CC   comprising the protein, nucleic acid or antibody is useful for the
CC   manufacture of a medicament for treating or preventing N. gonorrhoeae
CC   infection, this may be in the form of a vaccine or gene therapy.
CC   Sequences given in records ABZ37706-ABZ42016 represent nucleic acid
CC   molecules of the invention.

PT   amplicons from chemically treated DNA  -
XX
PS   Claim 12; 56pp + Sequence Listing; 56pp; German.
XX
CC   This invention describes a novel method for determining the degree of
CC   methylation of a particular cytosine in a motif 5'-CpG-3', present in a
CC   genomic sample of DNA. The sample is treated chemically to convert
CC   cytosine (C) but not methylated C, to uracil, then part of the genomic
CC   DNA that contains the target C is amplified to form a labeled amplicon.
CC   The amplicon is hybridised to two classes, each with at least one
CC   member, of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers
CC   and the degree of hybridisation to both classes is determined from the
CC   label on the amplicon. From the ratio of labels hybridised to the two
CC   classes of oligomers, the degree of methylation is calculated. The method
CC   is used: (i) for diagnosis and/or prognosis of side effects of
CC   therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders
CC   of the central nervous, cardiovascular, gastrointestinal and respiratory
CC   systems etc., particularly by detecting mutations or single nucleotide
CC   polymorphisms (SNP's); and (ii) for differentiation of cell or tissue
CC   types and for investigating cell differentiation. The method allows the
CC   methylation status of many C residues to be determined simultaneously.
CC   ABQ13410-ABQ54121 represent genomic DNA sequences used to illustrate the
CC   method for determining the degree of cytosine methylation described in
CC   the disclosure of the invention.

XX
PT   Nucleic acids encoding 3224 human nervous system antigen polypeptides,
PT   useful for preventing, diagnosing and/or treating nervous system
PT   cancers and metastases -
XX
PS   Disclosure; SEQ ID NO 7720; 1701pp + Sequence Listing; English.
XX
CC   The invention relates to novel genes (ABA11004-ABA21534) and proteins
CC   (ABB14678-ABB18001) useful for preventing, treating or ameliorating
CC   medical conditions e.g. by protein or gene therapy. The genes are
CC   isolated from a range of human tissues disclosed in the specification.
CC   The nucleic acids, proteins, antibodies and (ant)agonists are useful
CC   in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast
CC   and ovarian cancer and other cancers of the adrenal gland, bone, bone
CC   marrow, breast, gastrointestinal tract, liver, lung, or urogenital;
CC   (b) immune disorders e.g. Addison's disease, allergies, autoimmune
CC   haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's
CC   disease, multiple sclerosis, rheumatoid arthritis and ulcerative
CC   colitis; (c) cardiovascular disorders such as myocardial ischaemias;
CC   (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and
CC   epilepsy; and (f) infectious diseases such as viral, bacterial, fungal
CC   and parasitic infections.
CC   Note: The sequence data for this patent did not form part of the
CC   printed specification, but was obtained in electronic format directly
CC   from WIPO at ftp.wipo.int/pub/published_pct_sequences.

PT   Haemophilus influenzae Rd genome recorded on computer readable
PT   medium  - useful for identifying commercially important nucleic acid
PT   fragments by homology searching
XX
PS   Claim 1; Page 77.2-77.1091; 1291pp; English.
XX
CC   This sequence represents the complete genome sequence of the bacterium
CC   Haemophilus influenzae strain Rd.  The invention relates to a computer
CC   readable medium (CRM) having recorded upon it the complete H.influenzae
CC   nucleotide sequence (I), a representative fragment of (I) or a nucleotide
CC   sequence at least 99% identical to (I).  By providing the full-length
```

```
CC   genomic sequence in a computer readable form, it is possible to identify
CC   commercially important nucleic acid fragments and expression modulating
CC   fragments (EMFs) of the Haemophilus genome. The EMFs can be used to
CC   regulate the expression of a nucleic acid molecule.  Vectors and altered
CC   organisms comprising the predicted ORFS can be used to produce any of the
CC   polypeptide fragments of the H. influenzae Rd genome.

PT   Polynucleotides encoding digestive system antigens, useful for
PT   diagnosing, treating, preventing and/or prognozing disorders of the
PT   digestive system, particularly cancer and cancer metastases -
XX
PS   Disclosure; SEQ ID NO 3082; 986pp; English.
XX
CC   The present invention provides the protein and coding sequences of a
CC   number of human digestive system antigens. These can be used in the
CC   diagnosis, treatment and prevention of digestive system disorders,
CC   including cancer, Meckel's diverticulum, bacterial or parasitic
CC   infections, appendicitis, Hirschsprung's disease, chronic colitis or
CC   ulcerative colitis. The present sequence is a genomic DNA fragment
CC   encoding a digestive system antigen of the invention.

PT   New isolated non-typeable Haemophilus influenzae BASB204 polypeptides
PT   useful as components of vaccines useful for treating bacterial
PT   infection such as otitis media, delayed speech learning, and
PT   inflammation of the middle ear  -
XX
PS   Example 1; Fig 3; 97pp; English.
XX
CC   The invention relates to an isolated polypeptide comprising an amino acid
CC   sequence which has 85% identity to the entire length of a fully defined
CC   non-typeable Haemophilus influenzae BASB204 polypeptide sequence, given
CC   in specification. The isolated protein, an immunogenic fragment of the
CC   protein or an antibody immunospecific for the protein or immunogenic
CC   fragment is useful for diagnosing a non-typeable H. influenzae infection.
CC   The molecules may be used in the prevention of adhesion of Gram-negative
CC   or Gram-positive bacteria to mammalian extracellular matrix proteins in
CC   wounds, to block bacterial adhesion between mammalian extracellular
CC   matrix and bacterial BASB204 protein that mediate tissue damage and/or to
CC   block the normal progression of pathogenesis in infections initiated
CC   other than by the implantation of in-dwelling devices. The isolated
CC   protein encoding polynucleotide is useful as a research reagent and
CC   material for discovery of treatments of and diagnostics for diseases,
```

```
CC   particularly human diseases. The antibody of the invention is useful for
CC   treating infections preferably bacterial infections such as otitis media
CC   in infants and children, pneumonia in elders, sinusitis, nosocomial
CC   infections, or invasive diseases, chronic otitis media with hearing loss,
CC   fluid accumulation in the middle ear, auditive nerve damage, delayed
CC   speech learning, infections of the upper respiratory tract and
CC   inflammation of the middle ear. This polynucleotide sequence represents a
CC   Haemophilus influenzae BASB204 related nucleic acid of the invention.

XX
PT   Nucleic acids encoding 3224 human nervous system antigen polypeptides,
PT   useful for preventing, diagnosing and/or treating nervous system
PT   cancers and metastases -
XX
PS   Disclosure; SEQ ID NO 11910; 1701pp + Sequence Listing; English.
XX
CC   The invention relates to novel genes (ABA11004-ABA21534) and proteins
CC   (ABB14678-ABB18001) useful for preventing, treating or ameliorating
CC   medical conditions e.g. by protein or gene therapy. The genes are
CC   isolated from a range of human tissues disclosed in the specification.
CC   The nucleic acids, proteins, antibodies and (ant)agonists are useful
CC   in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast
CC   and ovarian cancer and other cancers of the adrenal gland, bone, bone
CC   marrow, breast, gastrointestinal tract, liver, lung, or urogenital;
CC   (b) immune disorders e.g. Addison's disease, allergies, autoimmune
CC   haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's
CC   disease, multiple sclerosis, rheumatoid arthritis and ulcerative
CC   colitis; (c) cardiovascular disorders such as myocardial ischaemias;
CC   (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and
CC   epilepsy; and (f) infectious diseases such as viral, bacterial, fungal
CC   and parasitic infections.
CC   Note: The sequence data for this patent did not form part of the
CC   printed specification, but was obtained in electronic format directly
CC   from WIPO at ftp.wipo.int/pub/published_pct_sequences.

PT Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
PT useful for preventing, diagnosing and/or treating cancers and
PT metastasis -
XX
PS Disclosure; SEQ ID NO 26562; 3071pp + Sequence Listing; English.
XX
CC AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC activity, and can be used in gene therapy and vaccine production. (I)
CC proteins and polynucleotides may be used in the prevention, diagnosis and
CC treatment of diseases associated with inappropriate (I) expression. For
CC example, they may be used to treat disorders associated with decreased
CC expression by rectifying mutations or deletions in a patient's genome
CC that affect the activity of (I) by expressing inactive proteins or to
CC supplement the patients own production of (I). Additionally, (I)
CC polynucleotides may be used to produce the secreted (I), by inserting
CC the nucleic acids into a host cell and culturing the cell to express the

```
CC   protein. (I) proteins and polynucleotides may be used to prevent,
CC   diagnose and treat immune/haematopoietic-related diseases, especially
CC   cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC   to AAK87694 represent human immune/haematopoietic antigen genomic
CC   sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC   represent sequences used in the exemplification of the present invention.

PT   Identifying a compound that modulates an attention deficit
PT   hyperactivity disorder (ADHD) for treating e.g. ADHD or hypertension,
PT   comprises measuring a foraging behaviour an invertebrate -
XX
PS   Claim 89; Page 182-195; 246pp; English.
XX
CC   The present invention relates to a method of identifying a compound
CC   that modulates attention deficit hyperactivity disorder (ADHD) in
CC   a mammal. The method comprises administering a test compound to
CC   an invertebrate, and measuring a foraging behaviour of the
CC   invertebrate, where the compound that modulates the foraging behaviour
CC   of the invertebrate is characterised as a compound that modulates
CC   ADHD in a mammal. The compound identified by the new method of the
CC   invention is useful for diagnosing or treating ADHD, hypertension or
CC   other diseases associated with a nitric oxide/cGMP-dependent protein
CC   kinase network in a mammal, particularly humans. The method
CC   distinguishes a compound that has a specific effect on ADHD,
CC   hypertension or other diseases associated with a
CC   nitric oxide/cGMP-dependent kinase protein network
CC   in a mammal from a compound that has a non-specific effect. The
CC   present sequence represents a DNA sequence associated with
CC   invertebrate foraging behaviour.

PT Amplifying nucleic acid for constructing artificial chromosomes,
PT comprises introducing a DNA fragment into a cell to incorporate the DNA
PT into a chromosome, and identifying cells with chromosomes that has
PT undergone amplification -
XX
PS Disclosure; Page 76-94; 107pp; English.
XX
CC The present invention relates to methods for amplifying nucleic acids
CC in cells, for isolating artificial chromosomes, and preparing cell
CC lines that contain artificial chromosomes. The methods comprise
CC introducing a DNA fragment comprising a selectable marker into a cell,
CC growing the cell under selective conditions to produce cells that have
CC incorporated the DNA fragment or its portion into a chromosome, and
CC identifying from among the resulting cells those that include a
CC chromosome or its fragment with a portion that has undergone
CC amplification. The invention also discloses cells and cell lines that
CC contain the nucleic acids or artificial chromosomes. The methods of
CC the invention are useful for amplifying nucleic acids in cells, in
CC generating and isolating artificial chromosomes (e.g. mammalian
CC artificial chromosomes or MACs), and in delivering the chromosomes
CC to selected cells and tissues. The artificial chromosomes are useful
CC in gene therapy, gene product production systems, production
CC of humanised genetically transformed animal organs, production of
CC transgenic plants and animals that would employ chromosomal elements as
CC information storage vehicles, for analysis and study of centromere
CC function, for the production of artificial chromosome vectors, and for
CC the preparation of species-specific artificial chromosomes. The present
CC sequence representing the human ribosomal RNA (rRNA) gene is used in
CC the method of the present invention.
CC Note: All N nucleotides (EXCEPT those at positions 21526-21527, 23183,
CC 24975-24977, 28699, 28945, 34074 and 34474) have been added to the
CC sequence by the indexer to match the number of bases this sequence
CC is listed to contain in the sequence listing.

PT Novel murine polynucleotides that individually identify novel genes
PT into which a retroviral gene trap vector has been integrated, useful in
PT genomic analysis and in discovery, development of therapeutic and
PT diagnostic agents -
XX
PS Claim 2; SEQ ID NO 369; 29pp + Sequence Listing; English.
XX
CC The invention relates to isolated murine polynucleotides (I) comprising a
CC contiguous stretch of at least about 60 nucleotides of a sequence
CC (ABQ96733-ABQ98191) chosen from 1461 OMNIBANK gene trapped sequences
CC (GTSs). The novel genes can be used in a process to identify novel
CC polynucleotide sequences by comparing them to the novel gene sequences.
CC The novel genes and cells are useful in functional genomic analysis and
CC in the discovery and development of new therapeutic and diagnostic agents
CC and methods. (I) is useful for identifying the coding regions of the
CC murine genome, to isolate cDNAs, genomic clones or full-length
CC genes/polynucleotides or homologues, heterologues, paralogues or
CC orthologues that are capable of hybridising to one or more of the GTSs
CC under stringent conditions. (I) can be incorporated into a phage display
CC system that can be used to screen for proteins or other ligands, that are
CC capable of binding an amino acid sequence encoded by an oligonucleotide
CC or polynucleotide sequence in at least one of the GTS sequences. (I) is
CC useful in arrays, such as gene chips, to identify and characterise
CC temporal and tissue specific gene expression, to identify the gene of
CC interest from many sources and for genetic manipulations such as
CC antisense inhibition and gene targeting. Decreasing the level of
CC expression of (I) and/or down regulating the activity of peptides or
CC proteins encoded by (I) is useful for treating development and cell
CC differentiation disorders.
CC Note: The sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from USPTO
CC at sequdata.uspto.gov/sequence.html?DocID=20020081668.

XX
PT Nucleic acids encoding 3224 human nervous system antigen polypeptides,
PT useful for preventing, diagnosing and/or treating nervous system
PT cancers and metastases -
XX
PS Disclosure; SEQ ID NO 11909; 1701pp + Sequence Listing; English.
XX
CC The invention relates to novel genes (ABA11004-ABA21534) and proteins
CC (ABB14678-ABB18001) useful for preventing, treating or ameliorating
CC medical conditions e.g. by protein or gene therapy. The genes are
CC isolated from a range of human tissues disclosed in the specification.
CC The nucleic acids, proteins, antibodies and (ant)agonists are useful
CC in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast
CC and ovarian cancer and other cancers of the adrenal gland, bone, bone

```
CC   marrow, breast, gastrointestinal tract, liver, lung, or urogenital;
CC   (b) immune disorders e.g. Addison's disease, allergies, autoimmune
CC   haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's
CC   disease, multiple sclerosis, rheumatoid arthritis and ulcerative
CC   colitis; (c) cardiovascular disorders such as myocardial ischaemias;
CC   (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and
CC   epilepsy; and (f) infectious diseases such as viral, bacterial, fungal
CC   and parasitic infections.
CC   Note: The sequence data for this patent did not form part of the
CC   printed specification, but was obtained in electronic format directly
CC   from WIPO at ftp.wipo.int/pub/published_pct_sequences.

XX
PT Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
PT useful for preventing, diagnosing and/or treating cancers and
PT metastasis -
XX
PS Disclosure; SEQ ID NO 22383; 3071pp + Sequence Listing; English.
XX
CC AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC activity, and can be used in gene therapy and vaccine production. (I)
CC proteins and polynucleotides may be used in the prevention, diagnosis and
CC treatment of diseases associated with inappropriate (I) expression. For
CC example, they may be used to treat disorders associated with decreased
CC expression by rectifying mutations or deletions in a patient's genome
CC that affect the activity of (I) by expressing inactive proteins or to
CC supplement the patients own production of (I). Additionally, (I)
CC polynucleotides may be used to produce the secreted (I), by inserting
CC the nucleic acids into a host cell and culturing the cell to express the
CC protein. (I) proteins and polynucleotides may be used to prevent,
CC diagnose and treat immune/haematopoietic-related diseases, especially
CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC to AAK87694 represent human immune/haematopoietic antigen genomic
CC sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC represent sequences used in the exemplification of the present invention.

PT   Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
PT   useful for preventing, diagnosing and/or treating cancers and
PT   metastasis -
XX
PS   Disclosure; SEQ ID NO 26561; 3071pp + Sequence Listing; English.
XX
CC   AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC   amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC   activity, and can be used in gene therapy and vaccine production. (I)
CC   proteins and polynucleotides may be used in the prevention, diagnosis and
CC   treatment of diseases associated with inappropriate (I) expression. For
CC   example, they may be used to treat disorders associated with decreased
CC   expression by rectifying mutations or deletions in a patient's genome
CC   that affect the activity of (I) by expressing inactive proteins or to
CC   supplement the patients own production of (I). Additionally, (I)
CC   polynucleotides may be used to produce the secreted (I), by inserting
CC   the nucleic acids into a host cell and culturing the cell to express the
CC   protein. (I) proteins and polynucleotides may be used to prevent,
CC   diagnose and treat immune/haematopoietic-related diseases, especially
CC   cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC   to AAK87694 represent human immune/haematopoietic antigen genomic
CC   sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC   represent sequences used in the exemplification of the present invention.

PT   Novel murine polynucleotides that individually identify novel genes
PT   into which a retroviral gene trap vector has been integrated, useful in
PT   genomic analysis and in discovery, development of therapeutic and
PT   diagnostic agents -
XX
PS   Claim 2; SEQ ID NO 295; 29pp + Sequence Listing; English.
XX
CC   The invention relates to isolated murine polynucleotides (I) comprising a
CC   contiguous stretch of at least about 60 nucleotides of a sequence
CC   (ABQ96733-ABQ98191) chosen from 1461 OMNIBANK gene trapped sequences
CC   (GTSs). The novel genes can be used in a process to identify novel
CC   polynucleotide sequences by comparing them to the novel gene sequences.
CC   The novel genes and cells are useful in functional genomic analysis and
CC   in the discovery and development of new therapeutic and diagnostic agents
CC   and methods. (I) is useful for identifying the coding regions of the
CC   murine genome, to isolate cDNAs, genomic clones or full-length
CC   genes/polynucleotides or homologues, heterologues, paralogues or
CC   orthologues that are capable of hybridising to one or more of the GTSs
CC   under stringent conditions. (I) can be incorporated into a phage display
CC   system that can be used to screen for proteins or other ligands, that are
CC   capable of binding an amino acid sequence encoded by an oligonucleotide
CC   or polynucleotide sequence in at least one of the GTS sequences. (I) is
CC   useful in arrays, such as gene chips, to identify and characterise
CC   temporal and tissue specific gene expression, to identify the gene of
CC   interest from many sources and for genetic manipulations such as
CC   antisense inhibition and gene targeting. Decreasing the level of
CC   expression of (I) and/or down regulating the activity of peptides or
CC   proteins encoded by (I) is useful for treating development and cell
CC   differentiation disorders.
CC   Note: The sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from USPTO
CC   at sequdata.uspto.gov/sequence.html?DocID=20020081668.

PT Colon tumor associated proteins and nucleic acids useful for the
PT prevention, diagnosis and treatment of colonic cancer -
XX
PS Claim 2; Page 426-431; 472pp; English.
XX
CC The present invention describes colon tumour associated proteins (I) and
CC the polynucleotides (II) that encode them. (I) have cytostatic activity.
CC (I) and (II) can be used in gene therapy and vaccine production. (I) and
CC (II) may be used in the prevention, diagnosis and treatment of diseases
CC associated with inappropriate colon tumour associated protein (TCAP)
CC expression, such as colonic cancer. For example, (I) and (II) may be
CC used to treat disorders associated with decreased expression by
CC rectifying mutations or deletions in a patient's genome that affect the
CC activity of TCAPs by expressing inactive proteins or to supplement the
CC patients own production of them. Additionally, (II) may be used to
CC produce the TCAP proteins, by inserting the nucleic acids into a host
CC cell culturing the cell to express the protein. (II) and its
CC complementary sequences may also be used as DNA probes in diagnostic
CC polymerase chain reaction (PCR) and hybridisation assays to detect and
CC quantitate the presence of similar nucleic acids in samples, and
CC therefore which patients may be in need of restorative therapy. (I) may
CC also be used as antigens in the production of antibodies against TCAPs
CC and in assays to identify modulators of TCAP expression and activity.
CC Anti-(I) antibodies and antagonists may also be used to down regulate
CC TCAP expression and activity. The anti-(I) antibodies may also be used
CC as diagnostic agents for detecting the presence of TCAPs in samples
CC (e.g. by enzyme linked immunosorbant assay (ELISA)). AAI28460 to AAI29512
CC and AAM24494 to AAM24523 represent nucleotide and amino acid sequences
CC given in the exemplification of the present invention.

PT Screening for anti-neoplastic agent involves exposing cells to a
PT chemical agent to be tested for anti-neoplastic activity, and
PT determining a change in expression of a gene of a signature gene set -
XX
PS Claim 1; SEQ ID 695; 44pp; English.
XX
CC The present invention describes a method (M1) for screening for an
CC anti-neoplastic agent. The method involves exposing cells to a chemical
CC agent to be tested for anti-neoplastic activity, determining a change in
CC expression of at least one gene (I) of a signature gene set, where (I)
CC comprises a sequence (S) selected from 8447 sequences (given in ABL61664
CC to ABL70110), or is at least 95% identical to (S), where a change in
CC expression is indicative of anti-neoplastic activity. (I) has cytostatic
CC activity and can be used in gene therapy. M1 can be used for screening
CC an anti-neoplastic agent, and can be used for producing a product which
CC is the data collected with respect to the anti-neoplastic agent as a
CC result of M1, and the data is sufficient to convey the chemical
CC structure and/or properties of the agent. M1 can be used in the
CC treatment of cancer such as colon, breast, stomach, lung, thyroid,
CC oesophageal, ovarian, kidney, prostate or pancreatic cancer,
CC adenocarcinoma, carcinoma, clear cell cancer, infiltrating ductal cancer,
CC infiltrating lobular cancer, squamous cell carcinoma, neuroendocrine
CC carcinoma, papillary carcinoma and Wilm's tumour.

PT New polynucleotide, useful for the preparation of a composition for
PT stimulating an immune response against, or treating, cancer -
XX
PS Disclosure; Page 428-433; 537pp; English.
XX
CC The present invention describes compounds (I) for the immunotherapy and
CC diagnosis of colon cancer. Also described: (1) a method for detecting
CC the presence of cancer in a patient; (2) a method for stimulating and/or
CC expanding T cells specific for a tumour protein; (3) an isolated T cell
CC population comprising T cells prepared by the method of (2); (4) a method
CC for stimulating an immune response in a patient; (5) a method for
CC treating cancer in a patient; and (6) a method for inhibiting the
CC development of cancer in a patient. (I) have immunostimulant and
CC cytostatic activities and can be used in vaccines. ABZ32646 to ABZ33725
CC and ABP55343 to ABP55391 represent human colon cancer/tumour related
CC sequences used in the exemplification of the present invention.

PT Novel murine polynucleotides that individually identify novel genes
PT into which a retroviral gene trap vector has been integrated, useful in
PT genomic analysis and in discovery, development of therapeutic and
PT diagnostic agents -
XX
PS Claim 2; SEQ ID NO 362; 29pp + Sequence Listing; English.
XX
CC The invention relates to isolated murine polynucleotides (I) comprising a
CC contiguous stretch of at least about 60 nucleotides of a sequence
CC (ABQ96733-ABQ98191) chosen from 1461 OMNIBANK gene trapped sequences
CC (GTSs). The novel genes can be used in a process to identify novel
CC polynucleotide sequences by comparing them to the novel gene sequences.
CC The novel genes and cells are useful in functional genomic analysis and
CC in the discovery and development of new therapeutic and diagnostic agents
CC and methods. (I) is useful for identifying the coding regions of the
CC murine genome, to isolate cDNAs, genomic clones or full-length
CC genes/polynucleotides or homologues, heterologues, paralogues or
CC orthologues that are capable of hybridising to one or more of the GTSs
CC under stringent conditions. (I) can be incorporated into a phage display
CC system that can be used to screen for proteins or other ligands, that are
CC capable of binding an amino acid sequence encoded by an oligonucleotide

```
CC   or polynucleotide sequence in at least one of the GTS sequences. (I) is
CC   useful in arrays, such as gene chips, to identify and characterise
CC   temporal and tissue specific gene expression, to identify the gene of
CC   interest from many sources and for genetic manipulations such as
CC   antisense inhibition and gene targeting. Decreasing the level of
CC   expression of (I) and/or down regulating the activity of peptides or
CC   proteins encoded by (I) is useful for treating development and cell
CC   differentiation disorders.
CC   Note: The sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from USPTO
CC   at sequdata.uspto.gov/sequence.html?DocID=20020081668.

PT Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
PT useful for preventing, diagnosing and/or treating cancers and
PT metastasis -
XX
PS Disclosure; SEQ ID NO 24254; 3071pp + Sequence Listing; English.
XX
CC AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC activity, and can be used in gene therapy and vaccine production. (I)
CC proteins and polynucleotides may be used in the prevention, diagnosis and
CC treatment of diseases associated with inappropriate (I) expression. For
CC example, they may be used to treat disorders associated with decreased
CC expression by rectifying mutations or deletions in a patient's genome
CC that affect the activity of (I) by expressing inactive proteins or to
CC supplement the patients own production of (I). Additionally, (I)
CC polynucleotides may be used to produce the secreted (I), by inserting
CC the nucleic acids into a host cell and culturing the cell to express the
CC protein. (I) proteins and polynucleotides may be used to prevent,
CC diagnose and treat immune/haematopoietic-related diseases, especially
CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC to AAK87694 represent human immune/haematopoietic antigen genomic
CC sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC represent sequences used in the exemplification of the present invention.

PT   Novel murine polynucleotides that individually identify novel genes
PT   into which a retroviral gene trap vector has been integrated, useful in
PT   genomic analysis and in discovery, development of therapeutic and
PT   diagnostic agents -
XX
PS   Claim 2; SEQ ID NO 736; 29pp + Sequence Listing; English.
XX
CC   The invention relates to isolated murine polynucleotides (I) comprising a
CC   contiguous stretch of at least about 60 nucleotides of a sequence
CC   (ABQ96733-ABQ98191) chosen from 1461 OMNIBANK gene trapped sequences
CC   (GTSs). The novel genes can be used in a process to identify novel
CC   polynucleotide sequences by comparing them to the novel gene sequences.
CC   The novel genes and cells are useful in functional genomic analysis and
CC   in the discovery and development of new therapeutic and diagnostic agents
CC   and methods. (I) is useful for identifying the coding regions of the
CC   murine genome, to isolate cDNAs, genomic clones or full-length
CC   genes/polynucleotides or homologues, heterologues, paralogues or
CC   orthologues that are capable of hybridising to one or more of the GTSs
CC   under stringent conditions. (I) can be incorporated into a phage display
CC   system that can be used to screen for proteins or other ligands, that are
CC   capable of binding an amino acid sequence encoded by an oligonucleotide
CC   or polynucleotide sequence in at least one of the GTS sequences. (I) is
CC   useful in arrays, such as gene chips, to identify and characterise
CC   temporal and tissue specific gene expression, to identify the gene of
CC   interest from many sources and for genetic manipulations such as
CC   antisense inhibition and gene targeting. Decreasing the level of
CC   expression of (I) and/or down regulating the activity of peptides or
CC   proteins encoded by (I) is useful for treating development and cell
CC   differentiation disorders.
CC   Note: The sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from USPTO
CC   at sequdata.uspto.gov/sequence.html?DocID=20020081668.

PT Fragments of chemically modified genes associated with tumour suppressor
PT genes and oncogenes, useful in designing primers and probes for
PT analysing diseases associated with cytosine methylation state e.g.
PT cancer -
XX
PS Claim 1; SEQ ID No 314; 27pp; English.
XX
CC The invention relates to a nucleic acid comprising a sequence of 18
CC bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with
CC bisulphite, of genes associated with tumour suppression and
CC oncogenes having a sequence taken from 536 (actually 533 since
CC numbers 408, 458 and 500 are missing from the sequence listing) sequences
CC (Ss) and sequences complementary to (Ss). The nucleic acid may be a
CC peptide nucleic acid-oligomer (PNA) of at least 9 nucleotides and may
CC form part of a set of probes for detecting the cytosine methylation state
CC and/or single nucleotide polymorphisms and also to be used in an
CC array for analysing diseases associated with CpG dinucleotides e.g.
CC cancers and tumours. The probes can also be used in a method for
CC ascertaining genetic and/or epigenetic parameters for the diagnosis
CC and/or therapy of existing diseases or the predisposition to specific
CC diseases, by analysing cytosine methylations. The parameters may be
CC compared to another set of genetic and/or epigenetic parameters, the
CC differences serving as basis for diagnosis and/or prognosis events which
CC are disadvantageous to patients. The present sequence is one of the
CC 533 genomic sequences derived from tumour suppressor genes and
CC oncogenes. Sequences with even numbered Seq ID numbers are the
CC complementary sequence of the corresponding odd numbered sequence (e.g.
CC ID 2 and ID1, ID 536 and ID 535, except for those whose partner sequence
CC is missing).
CC Note: The sequence data for this patent did not form part
CC of the printed specification, but was obtained in electronic
CC format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences.

PT New isolated polynucleotide and encoded polypeptides, useful in
PT diagnostics, forensics, gene mapping, identification of mutations
PT responsible for genetic disorders or other traits and to assess
PT biodiversity -
XX
PS Claim 1; SEQ ID No 6707; 103pp; English.
XX
CC The invention relates to isolated polynucleotide (I) and
CC polypeptide (II) sequences. (I) is useful as hybridisation probes,
CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome
CC and gene mapping, and in recombinant production of (II). The

```
CC   polynucleotides are also used in diagnostics as expressed sequence tags
CC   for identifying expressed genes. (I) is useful in gene therapy techniques
CC   to restore normal activity of (II) or to treat disease states involving
CC   (II). (II) is useful for generating antibodies against it, detecting or
CC   quantitating a polypeptide in tissue, as molecular weight markers and as
CC   a food supplement. (II) and its binding partners are useful in medical
CC   imaging of sites expressing (II). (I) and (II) are useful for treating
CC   disorders involving aberrant protein expression or biological activity.
CC   The polypeptide and polynucleotide sequences have applications in
CC   diagnostics, forensics, gene mapping, identification of mutations
CC   responsible for genetic disorders or other traits to assess biodiversity
CC   and to produce other types of data and products dependent on DNA and
CC   amino acid sequences. AAS64197-AAS94564 represent novel human
CC   diagnostic coding sequences of the invention.
CC   Note: The sequence data for this patent did not appear in the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences.

XX
PS Disclosure; SEQ ID NO 40658; 3071pp + Sequence Listing; English.
XX
CC AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC activity, and can be used in gene therapy and vaccine production. (I)
CC proteins and polynucleotides may be used in the prevention, diagnosis and
CC treatment of diseases associated with inappropriate (I) expression. For
CC example, they may be used to treat disorders associated with decreased
CC expression by rectifying mutations or deletions in a patient's genome
CC that affect the activity of (I) by expressing inactive proteins or to
CC supplement the patients own production of (I). Additionally, (I)
CC polynucleotides may be used to produce the secreted (I), by inserting
CC the nucleic acids into a host cell and culturing the cell to express the
CC protein. (I) proteins and polynucleotides may be used to prevent,
CC diagnose and treat immune/haematopoietic-related diseases, especially
CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC to AAK87694 represent human immune/haematopoietic antigen genomic
CC sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC represent sequences used in the exemplification of the present invention.

PT   New isolated non-typeable Haemophilus influenzae BASB204 polypeptides
PT   useful as components of vaccines useful for treating bacterial
PT   infection such as otitis media, delayed speech learning, and
PT   inflammation of the middle ear -
XX
PS   Example 2; Fig 3; 97pp; English.
XX
CC   The invention relates to an isolated polypeptide comprising an amino acid
CC   sequence which has 85% identity to the entire length of a fully defined
CC   non-typeable Haemophilus influenzae BASB204 polypeptide sequence, given
CC   in specification. The isolated protein, an immunogenic fragment of the
CC   protein or an antibody immunospecific for the protein or immunogenic
CC   fragment is useful for diagnosing a non-typeable H. influenzae infection.
CC   The molecules may be used in the prevention of adhesion of Gram-negative
CC   or Gram-positive bacteria to mammalian extracellular matrix proteins in
CC   wounds, to block bacterial adhesion between mammalian extracellular
CC   matrix and bacterial BASB204 protein that mediate tissue damage and/or to
CC   block the normal progression of pathogenesis in infections initiated
CC   other than by the implantation of in-dwelling devices. The isolated
CC   protein encoding polynucleotide is useful as a research reagent and
CC   material for discovery of treatments of and diagnostics for diseases,
CC   particularly human diseases. The antibody of the invention is useful for
CC   treating infections preferably bacterial infections such as otitis media
CC   in infants and children, pneumonia in elders, sinusitis, nosocomial
CC   infections, or invasive diseases, chronic otitis media with hearing loss,
CC   fluid accumulation in the middle ear, auditive nerve damage, delayed
CC   speech learning, infections of the upper respiratory tract and
CC   inflammation of the middle ear. This polynucleotide sequence represents a
CC   Haemophilus influenzae BASB204 related nucleic acid of the invention.

PT   Novel murine polynucleotides that individually identify novel genes
PT   into which a retroviral gene trap vector has been integrated, useful in
PT   genomic analysis and in discovery, development of therapeutic and
PT   diagnostic agents -
XX
PS   Claim 2; SEQ ID NO 246; 29pp + Sequence Listing; English.
XX
CC   The invention relates to isolated murine polynucleotides (I) comprising a
CC   contiguous stretch of at least about 60 nucleotides of a sequence
CC   (ABQ96733-ABQ98191) chosen from 1461 OMNIBANK gene trapped sequences
CC   (GTSs). The novel genes can be used in a process to identify novel
CC   polynucleotide sequences by comparing them to the novel gene sequences.
CC   The novel genes and cells are useful in functional genomic analysis and
CC   in the discovery and development of new therapeutic and diagnostic agents
CC   and methods. (I) is useful for identifying the coding regions of the
CC   murine genome, to isolate cDNAs, genomic clones or full-length
CC   genes/polynucleotides or homologues, heterologues, paralogues or
CC   orthologues that are capable of hybridising to one or more of the GTSs
CC   under stringent conditions. (I) can be incorporated into a phage display
CC   system that can be used to screen for proteins or other ligands, that are
CC   capable of binding an amino acid sequence encoded by an oligonucleotide
CC   or polynucleotide sequence in at least one of the GTS sequences. (I) is
CC   useful in arrays, such as gene chips, to identify and characterise
CC   temporal and tissue specific gene expression, to identify the gene of
CC   interest from many sources and for genetic manipulations such as
CC   antisense inhibition and gene targeting. Decreasing the level of
CC   expression of (I) and/or down regulating the activity of peptides or
CC   proteins encoded by (I) is useful for treating development and cell
CC   differentiation disorders.
CC   Note: The sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from USPTO
CC   at sequdata.uspto.gov/sequence.html?DocID=20020081668.

PT   Fragments of chemically modified genes associated with tumour suppressor
PT   genes and oncogenes, useful in designing primers and probes for
PT   analysing diseases associated with cytosine methylation state e.g.
PT   cancer -
XX
PS   Claim 1; SEQ ID No 144; 27pp; English.
XX
CC   The invention relates to a nucleic acid comprising a sequence of 18
CC   bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with
CC   bisulphite, of genes associated with tumour suppression and
CC   oncogenes having a sequence taken from 536 (actually 533 since
CC   numbers 408, 458 and 500 are missing from the sequence listing) sequences
CC   (Ss) and sequences complementary to (Ss). The nucleic acid may be a
CC   peptide nucleic acid-oligomer (PNA) of at least 9 nucleotides and may
CC   form part of a set of probes for detecting the cytosine methylation state
CC   and/or single nucleotide polymorphisms and also to be used in an
CC   array for analysing diseases associated with CpG dinucleotides e.g.
CC   cancers and tumours. The probes can also be used in a method for
CC   ascertaining genetic and/or epigenetic parameters for the diagnosis
CC   and/or therapy of existing diseases or the predisposition to specific
CC   diseases, by analysing cytosine methylations. The parameters may be
CC   compared to another set of genetic and/or epigenetic parameters, the
CC   differences serving as basis for diagnosis and/or prognosis events which
CC   are disadvantageous to patients. The present sequence is one of the
```

```
CC   533 genomic sequences derived from tumour suppressor genes and
CC   oncogenes. Sequences with even numbered Seq ID numbers are the
CC   complementary sequence of the corresponding odd numbered sequence (e.g.
CC   ID 2 and ID1, ID 536 and ID 535, except for those whose partner sequence
CC   is missing).
CC   Note: The sequence data for this patent did not form part
CC   of the printed specification, but was obtained in electronic
CC   format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences.

XX
CC   The specification describes antisense oligonucleotides (AAX52869-X55271)
CC   directed against at least 2 mRNAs selected from target genes, coding and
CC   non-coding regions of RNAs corresponding to target genes, gene
CC   initiation codons, genomic flanking regions, intron-exon borders, the
CC   5'-end, the 3'-end and the juxta-section between coding and non-coding
CC   regions and all segments of RNAs encoding proteins associated with one
CC   or more diseases, conditions or mixtures. The antisense oligonucleotides
CC   may be derived from sequences AAX55272-74. These multiple target
CC   oligonucleotides (specifically AAX55180-271) can be used for the
CC   antisense treatment of diseases and conditions. Typical diseases and
CC   conditions are those associated with impaired respiration and
CC   inflammation, including lung diseases, pulmonary vasoconstriction,
CC   inflammation, allergic rhinitis, acute asthma, allergies, asthma, impeded
CC   respiration, respiratory distress syndrome, pain, cystic fibrosis,
CC   pulmonary hypertension, pulmonary vasoconstriction, emphysema, chronic
CC   obstructive pulmonary disease (COPD), and cancers such as leukemias,
CC   lymphomas, carcinomas e.g. colon cancer, breast cancer, lung cancer,
CC   pancreatic cancer, hepatocellular carcinoma, kidney cancer, melanoma,
CC   hepatic metastases, as well as all types of cancers which may metastasize
CC   or have metastasized to the lungs, including breast and prostate cancer.

PT Novel murine polynucleotides that individually identify novel genes
PT into which a retroviral gene trap vector has been integrated, useful in
PT genomic analysis and in discovery, development of therapeutic and
PT diagnostic agents -
XX
PS Claim 2; SEQ ID NO 465; 29pp + Sequence Listing; English.
XX
CC The invention relates to isolated murine polynucleotides (I) comprising a
CC contiguous stretch of at least about 60 nucleotides of a sequence
CC (ABQ96733-ABQ98191) chosen from 1461 OMNIBANK gene trapped sequences
CC (GTSs). The novel genes can be used in a process to identify novel
CC polynucleotide sequences by comparing them to the novel gene sequences.
CC The novel genes and cells are useful in functional genomic analysis and
CC in the discovery and development of new therapeutic and diagnostic agents
CC and methods. (I) is useful for identifying the coding regions of the
CC murine genome, to isolate cDNAs, genomic clones or full-length
CC genes/polynucleotides or homologues, heterologues, paralogues or
CC orthologues that are capable of hybridising to one or more of the GTSs
CC under stringent conditions. (I) can be incorporated into a phage display
CC system that can be used to screen for proteins or other ligands, that are
CC capable of binding an amino acid sequence encoded by an oligonucleotide
CC or polynucleotide sequence in at least one of the GTS sequences. (I) is
CC useful in arrays, such as gene chips, to identify and characterise
CC temporal and tissue specific gene expression, to identify the gene of
CC interest from many sources and for genetic manipulations such as
CC antisense inhibition and gene targeting. Decreasing the level of
CC expression of (I) and/or down regulating the activity of peptides or
CC proteins encoded by (I) is useful for treating development and cell
CC differentiation disorders.
CC Note: The sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from USPTO
CC at sequdata.uspto.gov/sequence.html?DocID=20020081668.

PT   New isolated non-typeable Haemophilus influenzae BASB204 polypeptides
PT   useful as components of vaccines useful for treating bacterial
PT   infection such as otitis media, delayed speech learning, and
PT   inflammation of the middle ear  -
XX
PS   Example 2; Fig 3; 97pp; English.
XX
CC   The invention relates to an isolated polypeptide comprising an amino acid
CC   sequence which has 85% identity to the entire length of a fully defined
CC   non-typeable Haemophilus influenzae BASB204 polypeptide sequence, given
CC   in specification. The isolated protein, an immunogenic fragment of the
CC   protein or an antibody immunospecific for the protein or immunogenic
CC   fragment is useful for diagnosing a non-typeable H. influenzae infection.
CC   The molecules may be used in the prevention of adhesion of Gram-negative
CC   or Gram-positive bacteria to mammalian extracellular matrix proteins in
CC   wounds, to block bacterial adhesion between mammalian extracellular
CC   matrix and bacterial BASB204 protein that mediate tissue damage and/or to
CC   block the normal progression of pathogenesis in infections initiated
CC   other than by the implantation of in-dwelling devices. The isolated
CC   protein encoding polynucleotide is useful as a research reagent and
CC   material for discovery of treatments of and diagnostics for diseases,
CC   particularly human diseases. The antibody of the invention is useful for
CC   treating infections preferably bacterial infections such as otitis media
CC   in infants and children, pneumonia in elders, sinusitis, nosocomial
CC   infections, or invasive diseases, chronic otitis media with hearing loss,
CC   fluid accumulation in the middle ear, auditive nerve damage, delayed
CC   speech learning, infections of the upper respiratory tract and
CC   inflammation of the middle ear. This polynucleotide sequence represents a
CC   Haemophilus influenzae BASB204 related nucleic acid of the invention.

PT New isolated non-typeable Haemophilus influenzae BASB204 polypeptides
PT useful as components of vaccines useful for treating bacterial
PT infection such as otitis media, delayed speech learning, and
PT inflammation of the middle ear -
XX
PS Example 2; Fig 3; 97pp; English.
XX
CC The invention relates to an isolated polypeptide comprising an amino acid
CC sequence which has 85% identity to the entire length of a fully defined
CC non-typeable Haemophilus influenzae BASB204 polypeptide sequence, given
CC in specification. The isolated protein, an immunogenic fragment of the
CC protein or an antibody immunospecific for the protein or immunogenic
CC fragment is useful for diagnosing a non-typeable H. influenzae infection.
CC The molecules may be used in the prevention of adhesion of Gram-negative
CC or Gram-positive bacteria to mammalian extracellular matrix proteins in
CC wounds, to block bacterial adhesion between mammalian extracellular
CC matrix and bacterial BASB204 protein that mediate tissue damage and/or to
CC block the normal progression of pathogenesis in infections initiated
CC other than by the implantation of in-dwelling devices. The isolated
CC protein encoding polynucleotide is useful as a research reagent and
CC material for discovery of treatments of and diagnostics for diseases,
CC particularly human diseases. The antibody of the invention is useful for
CC treating infections preferably bacterial infections such as otitis media
CC in infants and children, pneumonia in elders, sinusitis, nosocomial
CC infections, or invasive diseases, chronic otitis media with hearing loss,
CC fluid accumulation in the middle ear, auditive nerve damage, delayed
CC speech learning, infections of the upper respiratory tract and
CC inflammation of the middle ear. This polynucleotide sequence represents a
CC Haemophilus influenzae BASB204 related nucleic acid of the invention.

PT Nucleic acids encoding 3224 human nervous system antigen polypeptides,
PT useful for preventing, diagnosing and/or treating nervous system
PT cancers and metastases -
XX
PS Disclosure; SEQ ID NO 9486; 1701pp + Sequence Listing; English.
XX
CC The invention relates to novel genes (ABA11004-ABA21534) and proteins
CC (ABB14678-ABB18001) useful for preventing, treating or ameliorating
CC medical conditions e.g. by protein or gene therapy. The genes are
CC isolated from a range of human tissues disclosed in the specification.
CC The nucleic acids, proteins, antibodies and (ant)agonists are useful
CC in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast
CC and ovarian cancer and other cancers of the adrenal gland, bone, bone
CC marrow, breast, gastrointestinal tract, liver, lung, or urogenital;
CC (b) immune disorders e.g. Addison's disease, allergies, autoimmune
CC haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's
CC disease, multiple sclerosis, rheumatoid arthritis and ulcerative
CC colitis; (c) cardiovascular disorders such as myocardial ischaemias;
CC (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and
CC epilepsy; and (f) infectious diseases such as viral, bacterial, fungal
CC and parasitic infections.
CC Note: The sequence data for this patent did not form part of the
CC printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pct_sequences.

PT   New protein from Neisseria gonorrheae, useful for the manufacture of a
PT   medicament for treating or preventing N. gonorrheae infection  -
XX
PS   Disclosure; Page 637; 815pp; English.
XX
CC   The present invention relates to proteins from Neisseria gonorrhoeae.
CC   Also disclosed are the nucleic acid molecules encoding the proteins and
CC   antibodies that specifically bind to the proteins. The composition
CC   comprising the protein, nucleic acid or antibody is useful for the
CC   manufacture of a medicament for treating or preventing N. gonorrhoeae
CC   infection, this may be in the form of a vaccine or gene therapy.
CC   Sequences given in records ABZ37706-ABZ42016 represent nucleic acid
CC   molecules of the invention.

PT   New isolated polynucleotide and encoded polypeptides, useful in
PT   diagnostics, forensics, gene mapping, identification of mutations
PT   responsible for genetic disorders or other traits and to assess
PT   biodiversity  -
XX
PS   Claim 1; SEQ ID No 12308; 103pp; English.
XX
CC   The invention relates to isolated polynucleotide (I) and
CC   polypeptide (II) sequences. (I) is useful as hybridisation probes,
CC   polymerase chain reaction (PCR) primers, oligomers, and for chromosome
CC   and gene mapping, and in recombinant production of (II). The
CC   polynucleotides are also used in diagnostics as expressed sequence tags
CC   for identifying expressed genes. (I) is useful in gene therapy techniques
CC   to restore normal activity of (II) or to treat disease states involving
CC   (II). (II) is useful for generating antibodies against it, detecting or
CC   quantitating a polypeptide in tissue, as molecular weight markers and as
CC   a food supplement. (II) and its binding partners are useful in medical
CC   imaging of sites expressing (II). (I) and (II) are useful for treating
CC   disorders involving aberrant protein expression or biological activity.
CC   The polypeptide and polynucleotide sequences have applications in
CC   diagnostics, forensics, gene mapping, identification of mutations
CC   responsible for genetic disorders or other traits to assess biodiversity
CC   and to produce other types of data and products dependent on DNA and
CC   amino acid sequences. AAS64197-AAS94564 represent novel human
CC   diagnostic coding sequences of the invention.
CC   Note: The sequence data for this patent did not appear in the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences.

PT   New polynucleotides encoding human secreted proteins - derived from
PT   e.g. human blood, kidney, foetal lung, placenta, testes, brain,
PT   ovary, pituitary, retina and colon cDNA libraries
XX
PS   Claim 1; Page 458; 641pp; English.
XX
CC   The present sequence represents an expressed sequence tag (EST), and is
CC   a polynucleotide of the invention. The polynucleotides of the invention
CC   are all secreted EST sequences isolated from a variety of human tissue
CC   sources. The EST sequences and proteins encoded by them are predicted to
CC   have useful biological activities which would make them suitable for
CC   treating, preventing or ameliorating medical conditions in humans and
CC   animals, although no supporting data is given. Suggested activities
CC   include nutritional activity, immune stimulating or suppressing activity,
CC   haematopoiesis regulating activity, tissue growth activity,
CC   activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic
CC   and thrombolytic activity, receptor/ligand activity, anti-inflammatory
CC   activity, cadherin/tumour invasion suppressor activity, tumour inhibition
CC   activity. The EST sequences are also stated to be useful for gene
CC   therapy.
